LINEAR MOTION TECHNOLOGY ONE GENERATION AHEAD: COMPLETE SOLUTION - MINIMAL ENGINEERING:

The Factory of the Future will be more profitable, sustainable and future-proof – despite increasingly individual and flexible production processes. The requirements are therefore defined. As a leading supplier of linear motion technology and mechatronic systems, Bosch Rexroth is already providing the answers today: with quick click product selection, simple configuration & ordering processes, and intuitive commissioning of complete solutions without any programming knowledge. This ensures an extremely short time-to-market and high productivity during operation, even for today's highly complex Today.

Factory of the future

Now. Next. Beyond.

NEARLY UNLIMITED FIELDS OF APPLICATION FOR MULTI-AXIS SYSTEMS

Pick & place

Positioning

Palletizing

Feeding

Parts placement

New standard for ready-to-install sub-systems: easier to select and configure, faster to install and get started

MULTI-AXIS SYSTEMS MADE EASY. EVERYTHING FROM A SINGLE SOURCE

Bosch Rexroth now makes the path to a ready-to-install sub-system unbeatably simple. More than 30 years of linear axis expertise have gone into the new multi-axis modular system and the completely revised LinSelect selection tool. There is no easier or faster way to select, configure and commission Cartesian multi-axis systems from standardized best-in-class components. You'll benefit from the latest generation of multi-axis systems from Bosch Rexroth: You'll receive ready-to-install, scalable positioning, handling and dispensing solutions made of proven and perfectly matched components, including all attachments, cable systems, motors and drive controllers – all from a single source, all from one company.

And if your fully assembled, fully integrable sub-system needs to be able to do even more, then take a look at the next step: Smart MechatroniX (see Smart Function Kits chapter) expands the components to include sensors, electronics and software – with completely new solution approaches and business models.

WE MOVE. YOU WIN.

◀ A smart solution as complete system – including sensors, electronics and software: Smart Function Kit Dispensing or Handling. See Smart Function Kits chapter.

Bolting

A customized multi-axis system with just a few clicks

You can easily check whether the latest generation of the LinSelect selection tool fulfills what is stated in the specifications – "simpler, faster and better than anything you know": **Download LinSelect (see link below) and try the tool for yourself. Or find out about the most important innovations and highlights here in advance.**

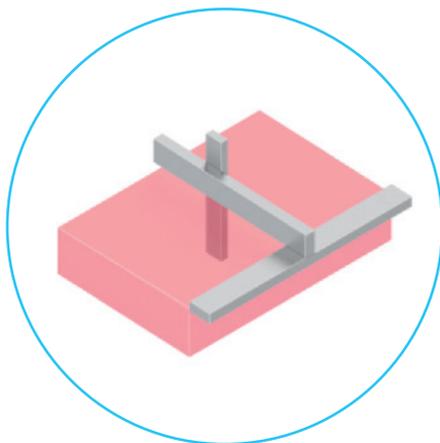

www.boschrexroth.de/linselect

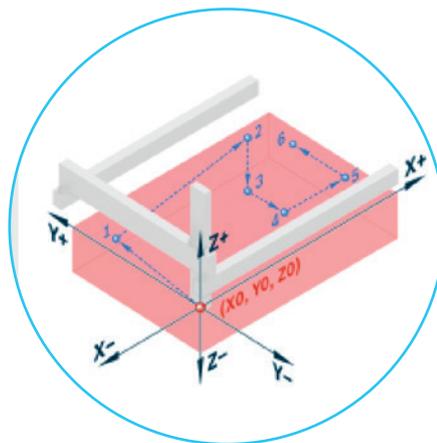

30 YEARS OF LINEAR AXIS KNOW-HOW INSIDE

Experience the concentrated expert knowledge of a leading supplier in linear motion technology – and as part of the Bosch Group also as a leading user – in every selection step of the new LinSelect. You are graphically guided and asked for a few parameters. This allows you to easily and quickly generate the appropriate reference cycle for your application, then receive detailed information and choices on running performance such as repeatability, for example. You can easily put together your own system from standardized best-in-class components, including electrics, software, drive and motor, with just a few clicks and without any engineering effort.

As a result, you will receive a recommendation in different performance variants and price settings – just as you are used to in a private context from online shops. You can then transfer the system data directly to the configurator and place your order. The CAD models are automatically available at Bosch Rexroth. By the way, commissioning is similarly fast. Could it be any easier?

- ▲ Simple selection via graphical interfaces instead of input fields

- ▲ Simply select a reference cycle instead of creating complex travel profiles

- ▲ Simply use interactive graphics instead of confusing tables

▲ Easy central access to all project information and links instead of long searches

LINSELECT - SIMPLE SELECTION MINIMAL ENGINEERING

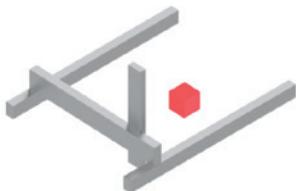

FEW PARAMETERS, ALL POSSIBILITIES – MANY ADVANTAGES

- + Fast:**
 - ▶ Select mechanics/motors/drive controllers in a single tool
 - ▶ Fast engineering, fast result, shorter time-to-market
- + Intuitive:**
 - ▶ Years of application experience implemented in easy-to-use interfaces
 - ▶ Visual support through interactive graphics and animations
- + Intelligent:**
 - ▶ Input of few parameters – output of prepared complex results with all relevant data
 - ▶ Transparent result overview with clear recommendation depending on performance requirements, delivery time or price
- + Interactive:**
 - ▶ Continuous tool chain: Automatically transfer result to the online configurator, finish configuration, order and generate CAD data
 - ▶ Central project and link management as well as documentation, bundled access to all project information – no decentralized storage, no long searches

◀ **SIMPLE INPUT**

Choose from 2 to 3 reference cycles – the system shows you the corresponding animation. Then simply define your desired system with 6 to 8 parameters for travel range, time and mass – LinSelect does the rest.

▼ **DETAILED OUTPUT**

LinSelect transforms your inputs into detailed characteristic curves for each axis. You have at least two reference cycles to choose from per portal. And you can conveniently continue to customize and play through them.

Best-in-class linear axes for motions in space

PROVEN QUALITY – FROM A SINGLE SOURCE, FROM ONE COMPANY

In the field of linear motion technology, Bosch Rexroth is second to none. For 30 years, we have stood for best-in-class components. They are the proven basis for state-of-the-art, robust, high-precision and yet economical multi-axis systems. And the best thing of all: Bosch Rexroth can also supply you with all the additional components and add-on parts required for your individual axis combination. All components are from a single source, optimally tailored to each other and quickly selected and configured. Could it be any easier?

▲ Handling portal instead of a robot.
An economical solution not only in intralogistics

COMPACT MODULES

CKK – compact linear axis with two integrated ball rail systems and ball screw assembly

Features

- ▶ 5 sizes from CKK-070 to CKK-200
- ▶ Precision aluminum profile with two preloaded ball rail systems
- ▶ Drive via precision ball screw assembly
- ▶ Protection of the installation elements by cover plate and cover strips
- ▶ Max. travel 1,800 mm
- ▶ High travel speeds of up to 1.6 m/s
- ▶ Any lengths available in mm steps

CKR – compact linear axis with two integrated ball rail systems and toothed belt drive

Features

- ▶ 4 sizes from CKR-090 to CKR-200
- ▶ Precision aluminum profile with two preloaded ball rail systems
- ▶ Robust toothed belt drive (allows longer lengths than CKK module)
- ▶ Intelligent toothed belt guide protects internal components
- ▶ Max. travel 3,000 mm
- ▶ High travel speeds of up to 5 m/s
- ▶ Any lengths available in mm steps

LINEAR MODULES

MKR – compact linear module with integrated ball rail system and toothed belt drive

Features

- ▶ 4 sizes from MKR-065 to MKR-140
- ▶ Extremely compact aluminum profile with preloaded ball rail system
- ▶ High-performance toothed belts for high travel speeds of up to 5 m/s
- ▶ Corrosion resistant steel cover strip
- ▶ Max. travel 3,000 mm
- ▶ Any lengths available in mm steps

MKR-145 - compact linear module with 2 ball rail systems and toothed belt drive

Features

- ▶ Compact aluminum profile with high inherent rigidity and 2 preloaded ball rail systems
- ▶ High-performance toothed belts for high travel speeds of up to 5 m/s
- ▶ Max. travel range 2,150 mm
- ▶ Any lengths available in mm steps

Compact meets modularity: Servo drives and motors

ctrlX DRIVE – THE MOST COMPACT DRIVE SYSTEM

In addition to the proven drives such as from the HCS01 series, the world’s most compact modular drive system is now available with ctrlX DRIVE. For absolutely future-proof multi-axis solutions. The ctrlX CORE control hardware is optionally integrated in the drive housing – saving you up to 50 percent space in the control cabinet. And even more in combination with the modern MS2N motors, as these offer up to 30 percent higher power density. It couldn’t be more compact.

Complete performance package

Particularly in complex multi-axis machine systems, the multi-variant and scalable drive portfolio can demonstrate its strengths. With ctrlX DRIVE, all System components can be freely combined with each other – plus the option of comprehensive extensions of the hardware/ software functions.

With a reaction time of around 4 ms, ctrlX SAFETY will offer one of the fastest SafeMotion solutions on the market in the future. Energy management functions ensure energy efficiency, and the patented Smart Energy Mode reduces peak drive loads by up to 70 percent. In addition, ctrlX DRIVE has an extremely robust EMC design.

▲ ctrlX DRIVE: the new modular drive system, optionally with integrated control ctrlX CORE (left)

▼ Control and power in one: The proven IndraDrive Cs (HCS01 in 4 sizes) controls axes perfectly in the power range of multi-axis systems

▲ **MS2N synchronous servo motors – for more torque and higher rotary speeds. With practical single-cable connection**

HIGHLIGHTS ctrlX DRIVE SYSTEM

More productivity

- ▶ Converters and supply units with high peak power ratings
- ▶ Flexible power supplier concept – space saving, flexible, energy-efficient

Fewer components

- ▶ 50% less installation space in the control cabinet
- ▶ Perfect for 300 mm control cabinet
- ▶ Integrated ctrlX CORE – saves 100% control installation space

Less engineering

- ▶ Intelligent functions (multi-Ethernet, multi-encoder, integrated web server etc.)
- ▶ Easy diagnosis
- ▶ Less effort for engineering and wiring
- ▶ Single-cable technology

POWERFUL SERVO MOTORS

Our servo motors are the perfect team players in the ctrlX DRIVE portfolio. Boasting compact dimensions, they combine optimum dynamics with maximum precision of position, rotary speed, and torque values. Ideal for complex multi-axis systems.

Virtual commissioning

Designers have access to the digital twin of the motor, which is stored in a dimensioning tool and in the ctrlX DRIVE controller. Planning and dimensioning of even complex drive systems can therefore be virtualized quickly and reliably. Every motor is transformed into a data source for intelligent machines or i4.0 applications.

HIGHLIGHTS MS2N SERVO MOTORS

More productivity

- ▶ High torque density for greater power
- ▶ 5 sizes from MS2N03 to MS2N07
- ▶ Maximum dynamics of the servo axes due to low motor inertia and high overload capability

Fewer components

- ▶ Robust single-cable connection
- ▶ MS2N with integrated SafeMotion encoder – no further safety components required
- ▶ Motor as torque sensor makes external sensors redundant

Less engineering

- ▶ Plug-and-play encoder data memory for faster commissioning
- ▶ Digital twin of the thermal motor model

Further highlights

- ▶ Plain shaft without shaft seal ring
- ▶ Multi-turn encoder
- ▶ Advanced encoder (B) in conjunction with 1-cable connector (AcuroLink interface)
- ▶ IP64 protection class
- ▶ With or without holding brake
- ▶ Special ground connection terminal near motor flange (used as needed)

Good to know: all details of a well thought out system

Practicality does not only become apparent in the tough day-to-day industrial operation, it can already be recognized beforehand by the many clever details, predefined interfaces and attachments as well as flexible options. Typical Bosch Rexroth

GENERAL NOTES

Installation position

The multi-axis systems are designed for use in a horizontal installation position on a flat surface.

Ambient conditions

Please note for use:

- ▶ Avoid extreme room temperatures
- ▶ Steer clear of contamination
- ▶ Maintain dry environment
- ▶ Stay away from chemical impact
- ▶ Elude shocks/vibrations

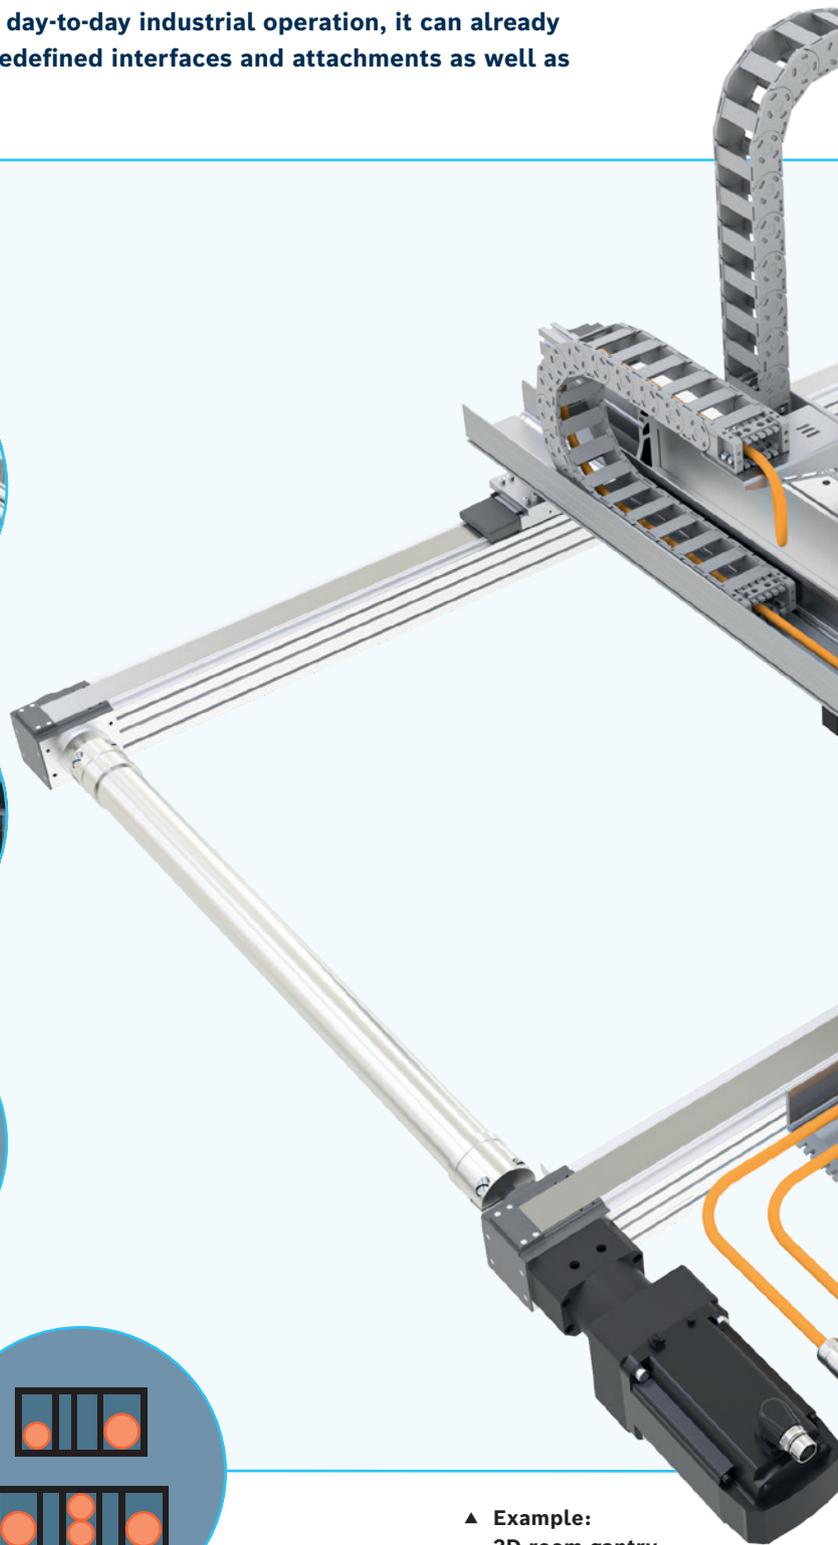

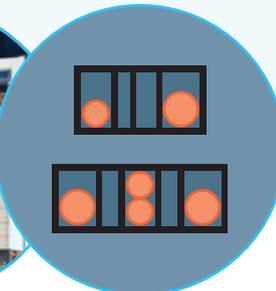

Lubrication/maintenance

Multi-axis systems come with initial greasing and are designed for grease lubrication.

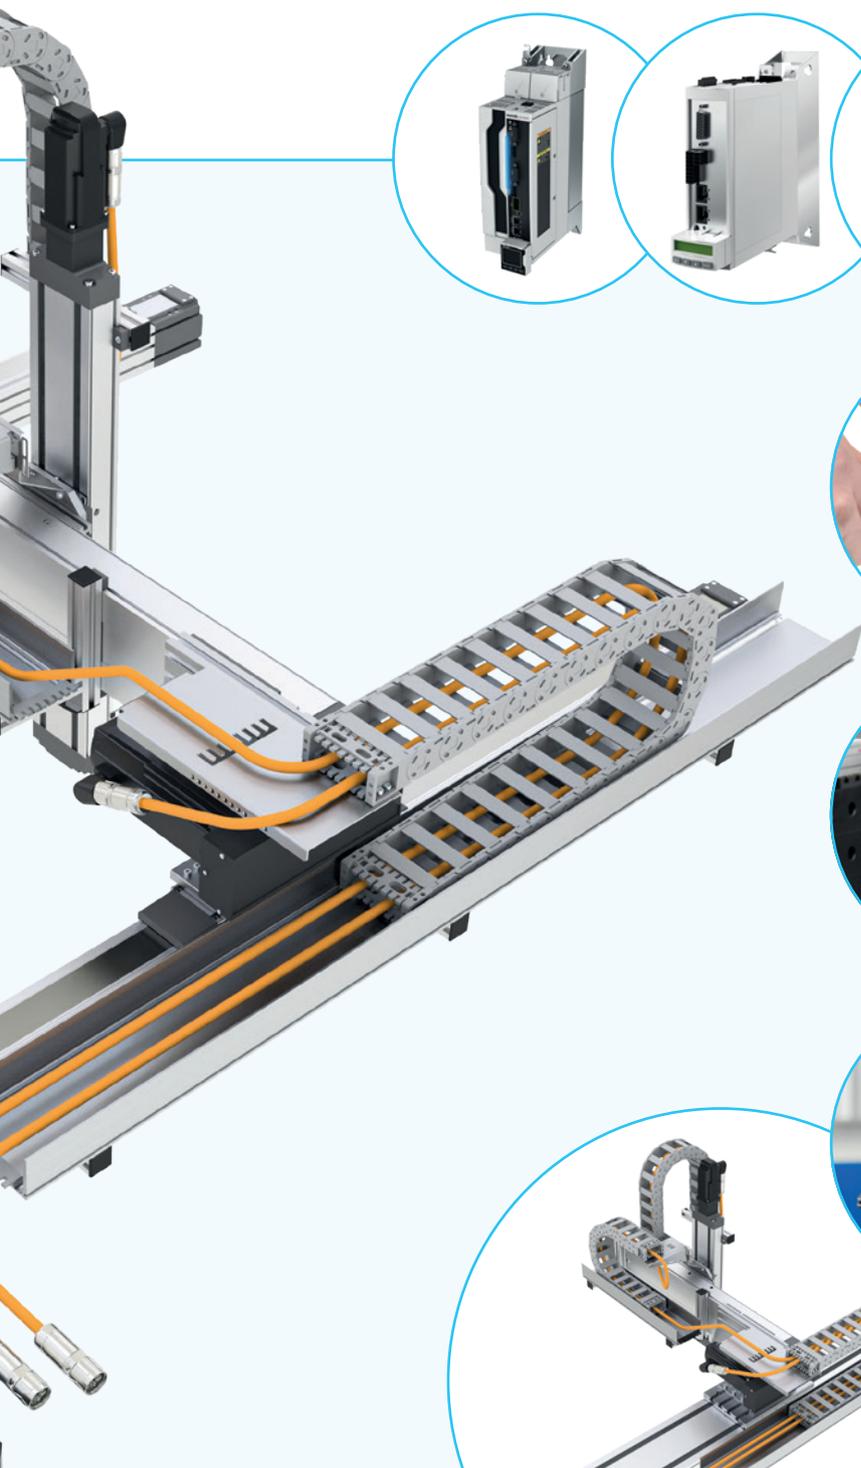

Cable management

Multi-axis systems are optionally available with energy chains and cables (plug connection). With plenty of free cross-sections in the energy chains for your own cable routing.

▲ Example:
3D room gantry

Tailored motor-controller combination

Predefined combinations of motor and controller (electrical drive package) optimally complement the mechanics to form a functional sub-system. The Smart Function Kits with pre-installed operating software offer even more. (Page 54).

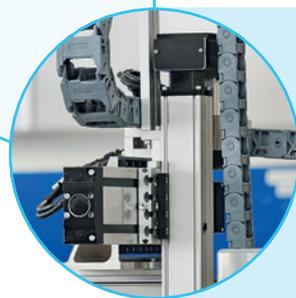

Commissioning parameters on encoder memory in motor

Simple commissioning through automated readout of the parameters stored in the motor encoder memory.

Attachments, connection options

Simple mounting of the axis unit on the mounting base via clamping fixtures. Wide range of connection options for customer attachments.

Scope of delivery

(depending on equipment)

Completely assembled: The multi-axis system is delivered fully assembled – including the energy chains and cables if cable management is selected as an option. The axis system is aligned on delivery and only needs to be adjusted to the mounting base during installation.

Partially assembled: For transport or handling reasons, the multi-axis system is delivered partially assembled. The assembly is carried out by the customer according to instructions.

► **Example:**
3D cantilever space

Flexible in every respect: 8 combinations of axes for precise handling

1D gantry

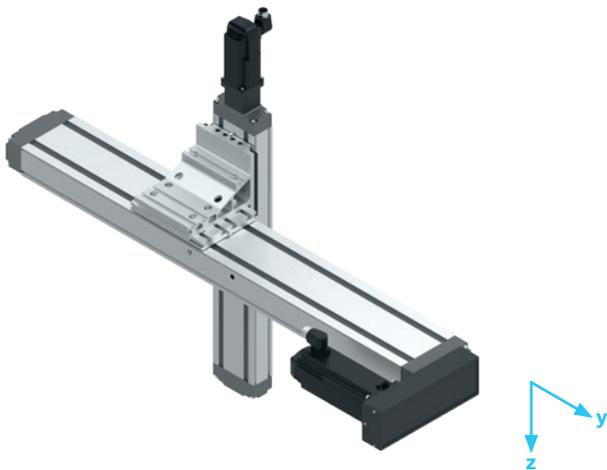

- ▶ 4 sizes
- ▶ Max. payload* 62 - 366 kg
- ▶ Travel range [mm]
x-axis min. 60, max. 3,000

2D area gantry

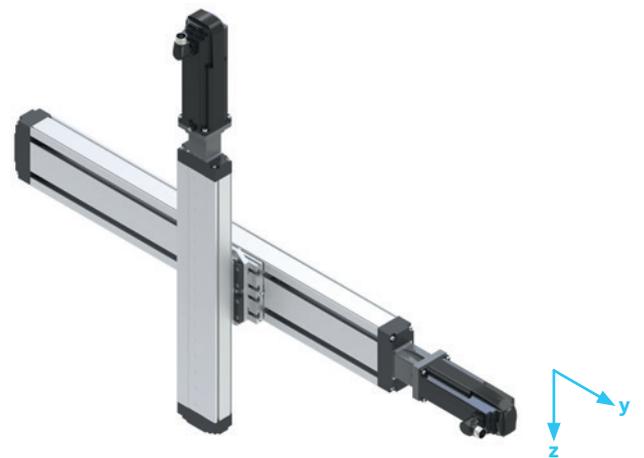

- ▶ 8 sizes
- ▶ Max. payload* 25 - 205 kg
- ▶ Travel range [mm]
x-axis min. 60, max. 3,000
y-axis min. 60, max. 2,869

2D linear gantry

- ▶ 8 sizes
- ▶ Max. payload* 10-61 kg
- ▶ Travel range [mm]
y-axis min. 50, max. 3,000
z-axis min. 40, max. 1,590

2D linear gantry, wall mounting

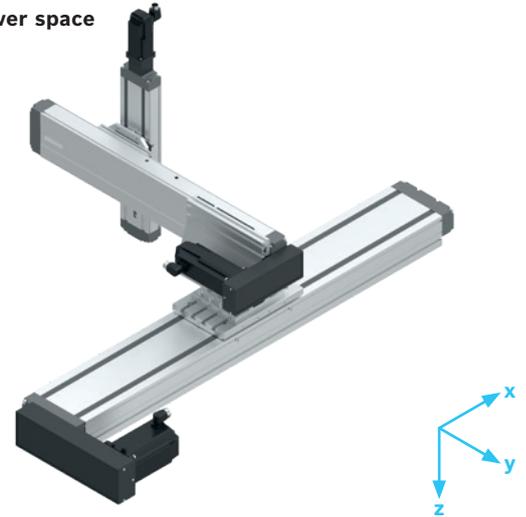

- ▶ 12 sizes
- ▶ Max. payload* 2 - 61 kg
- ▶ Travel range [mm]
y-axis min. 40, max. 3,000
z-axis min. 40, max. 1,590

* Depending on size, travel range and dynamics.

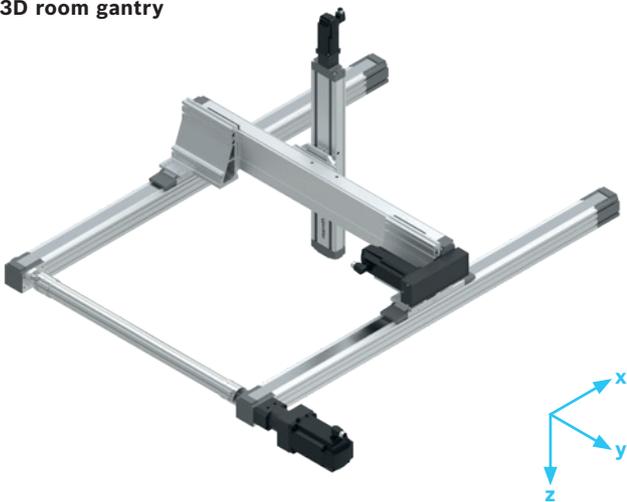

8 predefined axis combinations in 68 sizes offer you a lot of freedom for all common handling tasks. The travel ranges can be configured in all axial directions in mm increments. This allows you to make optimum use of installation space, obtain maximum flexibility during installation and adapt your sub-system perfectly to your application.

2D cantilever surface

- ▶ 12 sizes
- ▶ Max. payload* 5 - 82 kg
- ▶ Travel range [mm]
 - x-axis min. 40, max. 3,000
 - y-axis min. 40, max. 1,200

3D cantilever space

- ▶ 8 sizes
- ▶ Max. payload* 2.5 - 32.5 kg
- ▶ Travel range [mm]
 - x-axis min. 50, max. 3,000
 - y-axis min. 40, max. 880
 - z-axis min. 40, max. 1,325

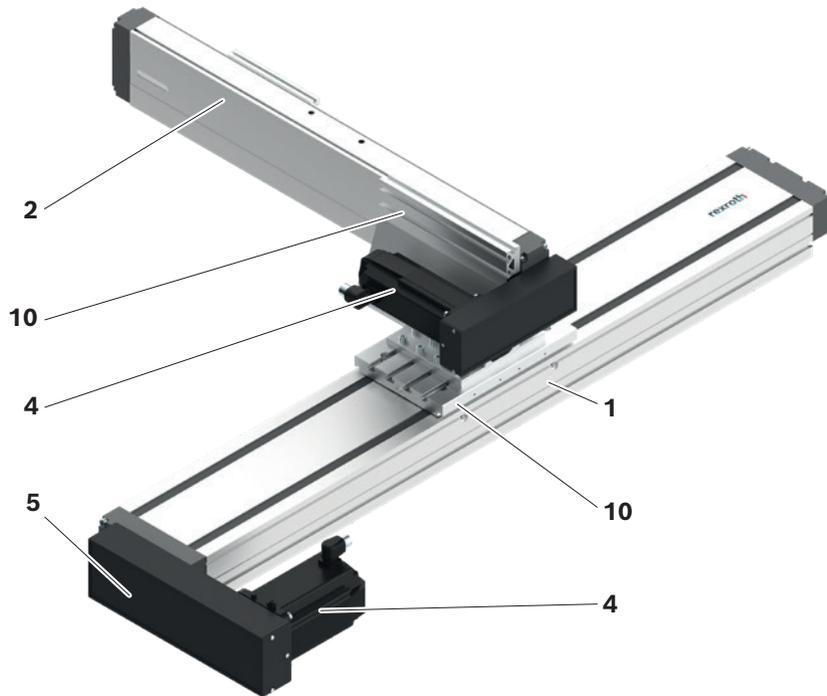

3D room gantry

- ▶ 10 sizes
- ▶ Max. payload* 10 - 160 kg
- ▶ Travel range [mm]
 - x-axis min. 60, max. 3,000
 - y-axis min. 60, max. 2,753
 - z-axis min. 40, max. 1,625

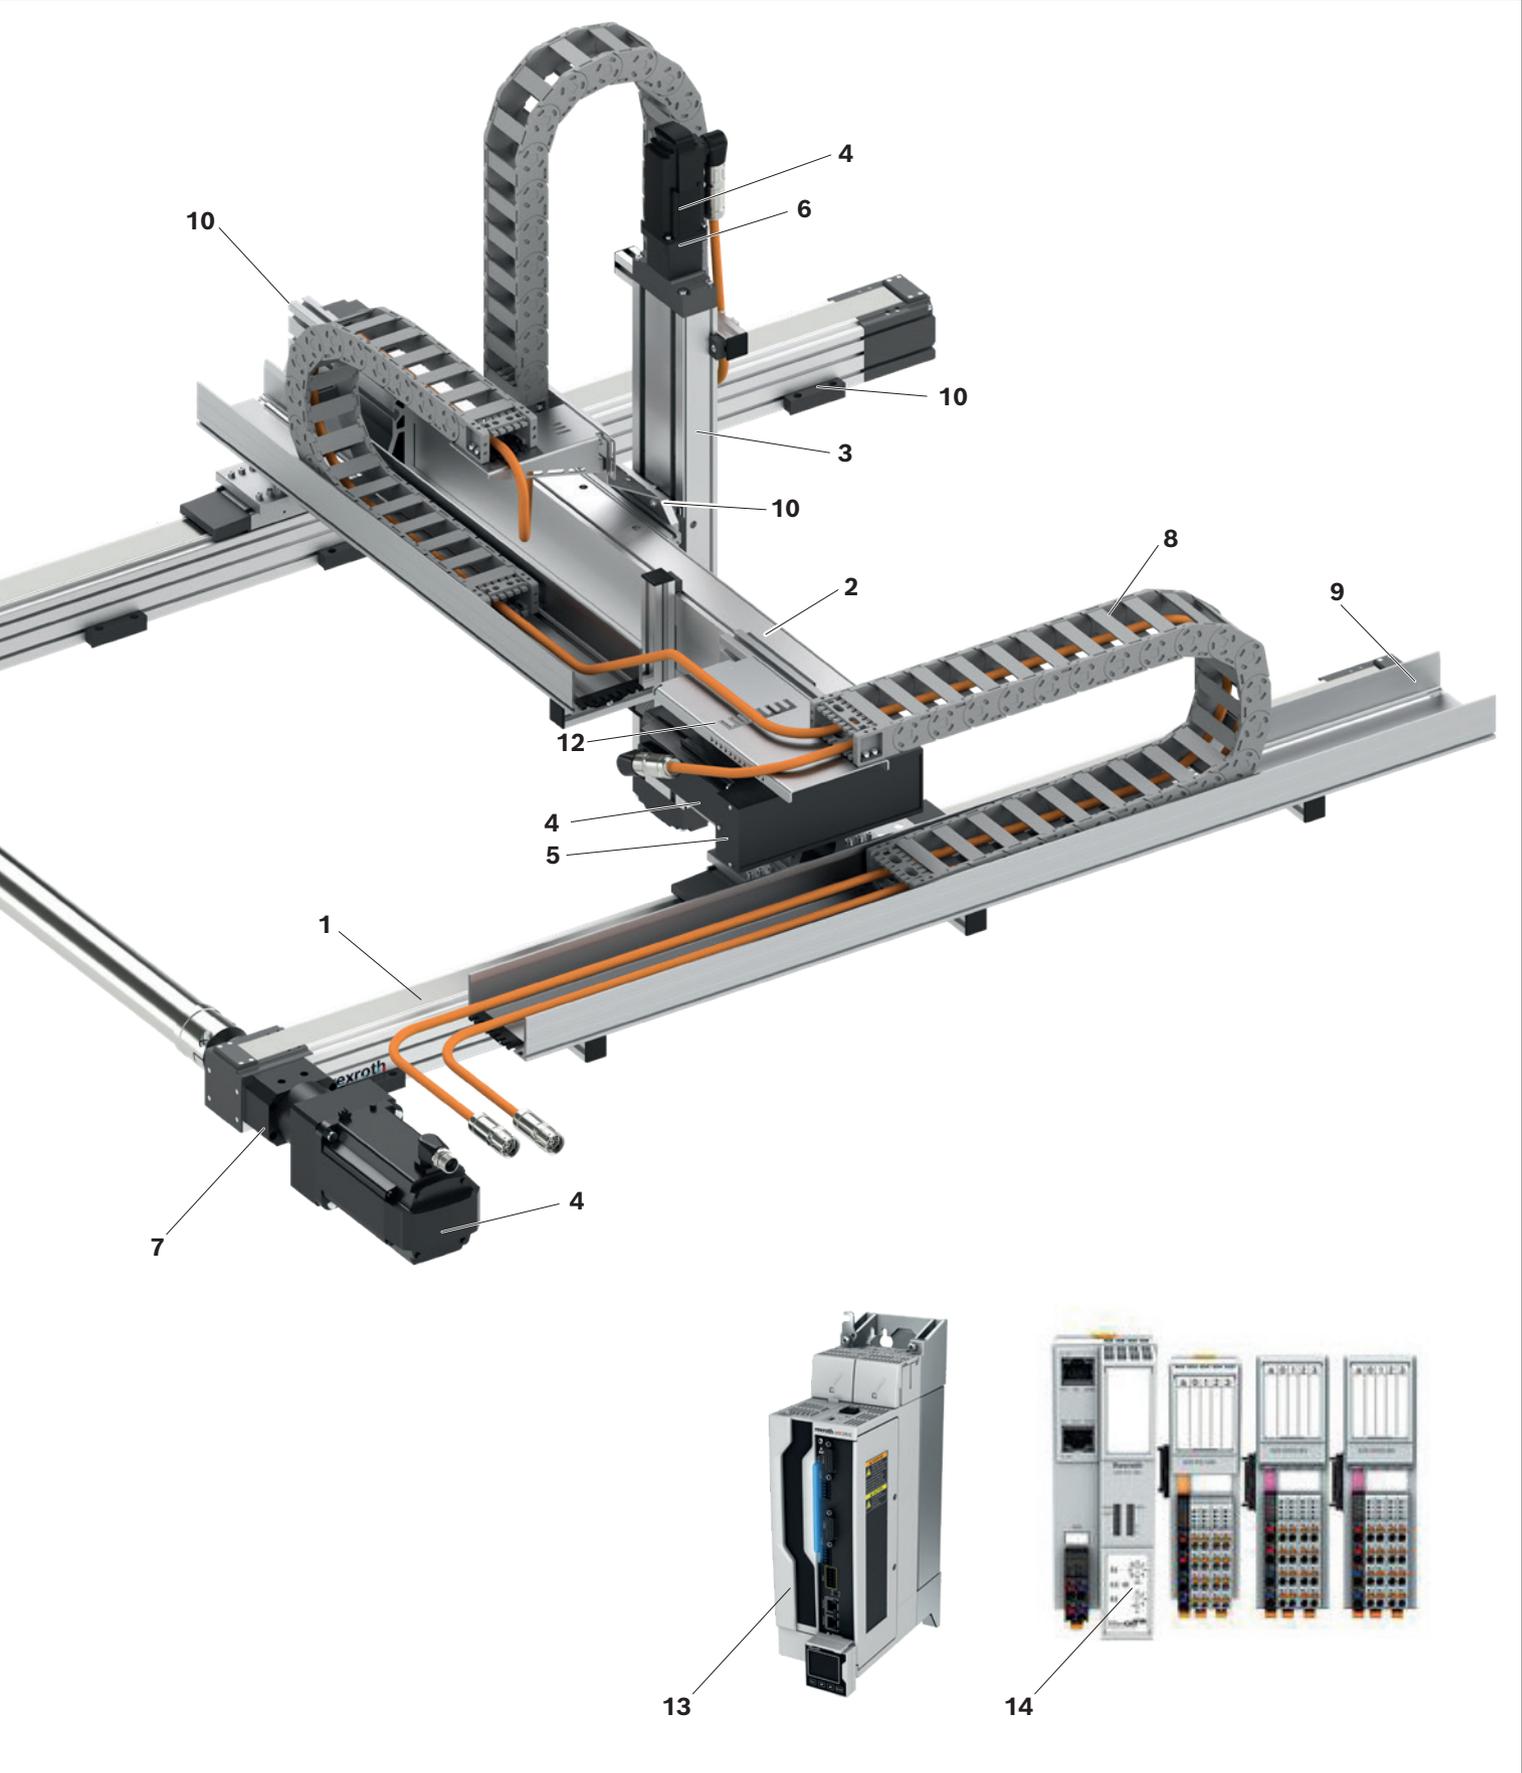

3D space portal, performance-optimized

- ▶ 6 sizes
- ▶ Max. payload* 34.5 - 65.5 kg
- ▶ Travel range [mm]
 - x-axis min. 60, max. 3,000
 - y-axis min. 345, max. 2,350
 - z-axis min. 50, max. 1,590

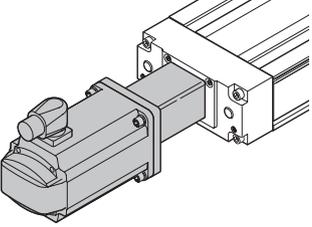

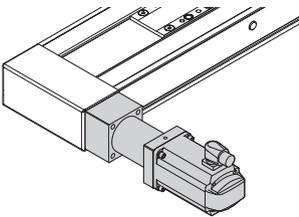

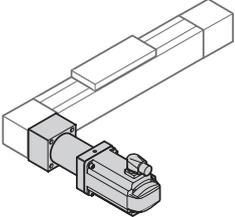

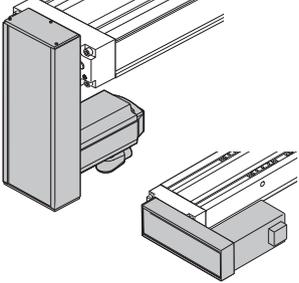

Example layout

- 1 X-axis/axes
- 2 Y-axis
- 3 Z-axis
- 4 Motor (connection e.g. via belt side drive (5), flange and coupling (6), gearing (7))
- 5 Belt side drive
- 6 Flange and coupling
- 7 Gearing
- 8 Cable drag chain
- 9 Storage tray
- 10 Connection elements (e.g. angle brackets, connection plate, clamping fixtures, etc.)
- 11 Connecting shaft
- 12 Cleated sheet
- 13 ctrlX Drive and drive controller with integrated ctrlX Core drive controller (with pre-installed software package and SFK4D app)
- 14 I/O modules (optional)

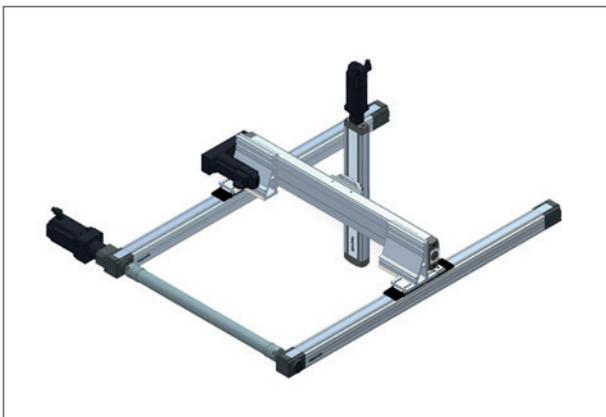

Rexroth linear axes provide for dynamic and precise movement in our multi-axis systems

Linear axes	Compact modules with ball screw assembly CKK	Compact modules with toothed belt drive CKR	Linear modules with toothed belt drive MKR

Motor attachment	Flange/coupling 	Gearing 	Gearing 
	Belt side drive 		

Motor position basic axis

The constructive alignment of the multi-axis systems can be selected as an option.
Example: Combination of axes 3D gantry, type 3SB

Motor basic axis, left (ML)

Motor basic axis, right (MR)

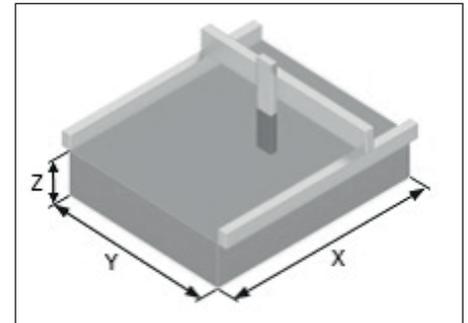

Technical notes

Maximum travel range

The travel ranges of the individual axes determine the maximum travel range of the multi-axis system as travel range limits without stroke reserves.

Any excess travel required as a safety distance in the end positions of the individual axes depends on the application and must therefore be taken into account accordingly by the user.

Therefore, the effectively usable working range is usually smaller than the maximum available travel range.

Example:
Travel range 3-axis combination

Technical data (maximum values)

Type	Axis	Linear axis	BASA: $d_0 \times P$ Toothed belt: Gear ratio i	v_{max} (m/s)	$M_{P\ max}$ (Nm)	a_{max} (m/s ²)	s_{min} (mm)	s_{min_EC} (mm)	s_{max} (mm)	Motor attachment	Motor	$m_{ex\ max}$ (kg)
3SB - 20	Z	CKK-090-NN-1	12 x 2	0.23	0.79	15	40	40	600	Flange/coupling	MS2N03-B0	10.0
			12 x 5	0.57	2.39							
			12 x 10	1.13	4.42							
	Y	CKK-110-NN-1	16 x 5	0.38	6.76	15	90	300	1 219	Belt side drive, $i = 1$	MS2N04	
			16 x 10	0.77	7.66							
			16 x 16	1.23	7.66							
	X	MKR-065-NN-3	$i = 3$	5.00	4.00	15	60	170	3 000	Gearing	MS2N04	
			$i = 5$	4.50	2.40							
			$i = 10$	2.30	1.20							

Example: Combination of axes 3D gantry, type 3SB

Values for maximum travel speed v_{max} , maximum drive torque $M_{P\ max}$ and maximum payload $m_{ex\ max}$ valid at minimum travel range.

For longer travel, length-dependent reduction for v_{max} and $M_{P\ max}$ for linear axes with ball screw drive or linear axes with connecting shaft as well as a reduction of $m_{ex\ max}$ depending on travel range and dynamics.

Abbreviations

Overview of abbreviations

Abbreviation/index	Designation	Unit
a_{max}	Maximum acceleration rate	(m/s ²)
$m_{ex\ max}$	Maximum permissible payload of the multi-axis system	(kg)
s_{min}	Minimum travel range	(mm)
s_{min_EC}	Minimum travel range as of which the cable drag chain can be fitted	(mm)
s_{max}	Maximum travel	(mm)
$M_{P\ max}$	Maximum drive torque	(Nm)
v_{max}	Maximum travel speed	(m/s)

Type 3SA

Product description

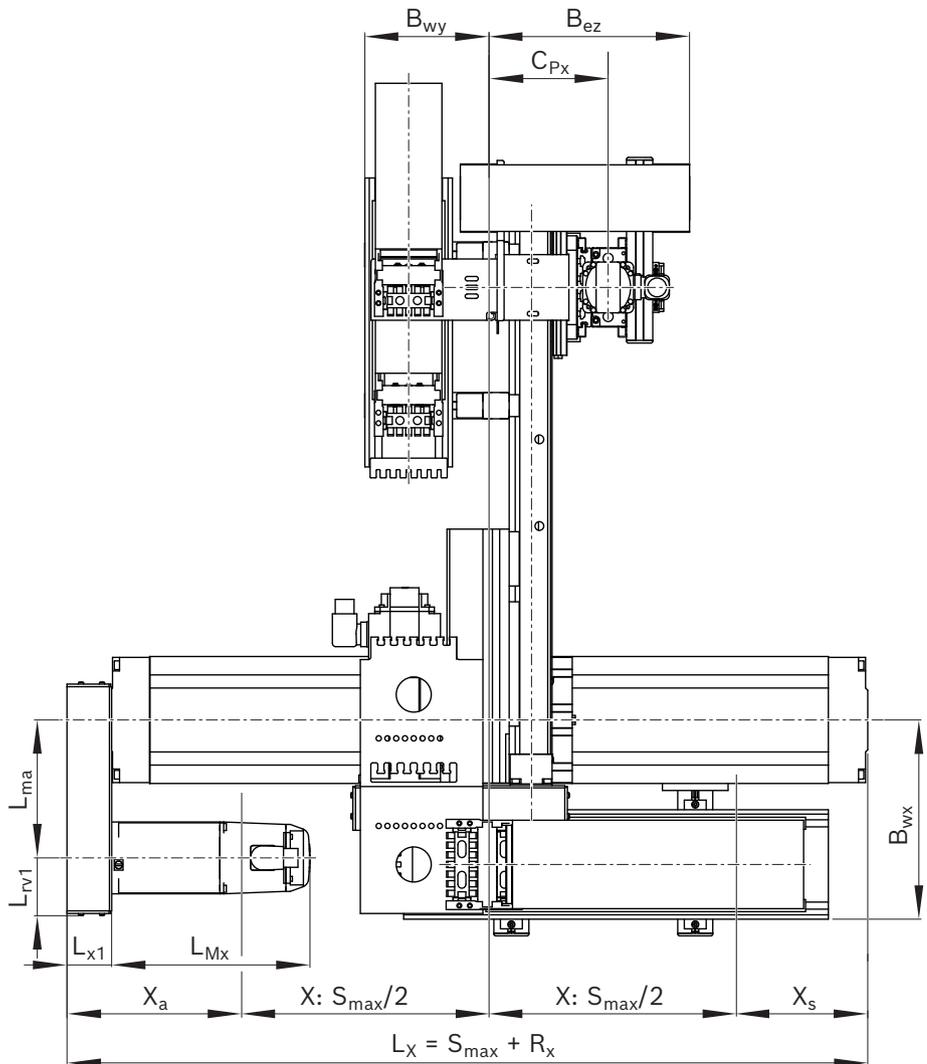

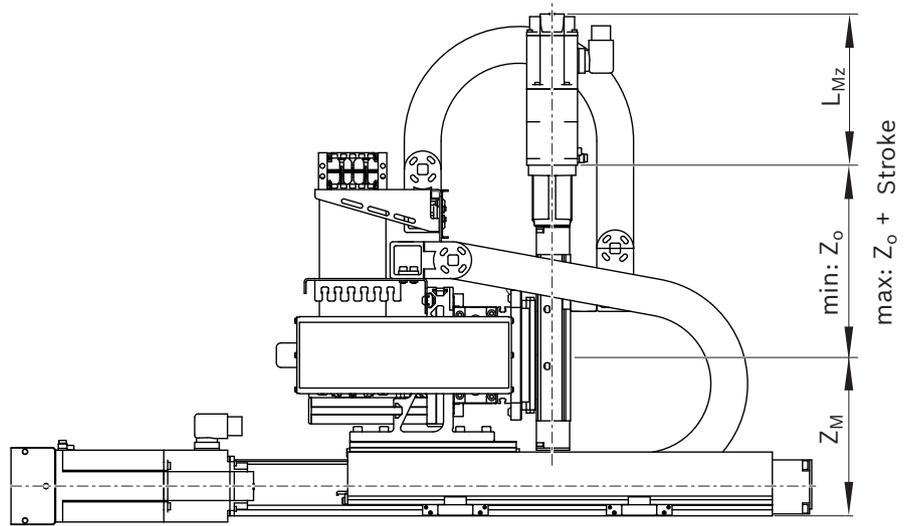

- For applications where a three-dimensional working range must be approached from the outside, the 3D cantilever chamber system is particularly suitable.
- In the basic axis compact modules with ball screw assembly or toothed belt drive.
- 8 sizes

Type 3SC

Product description

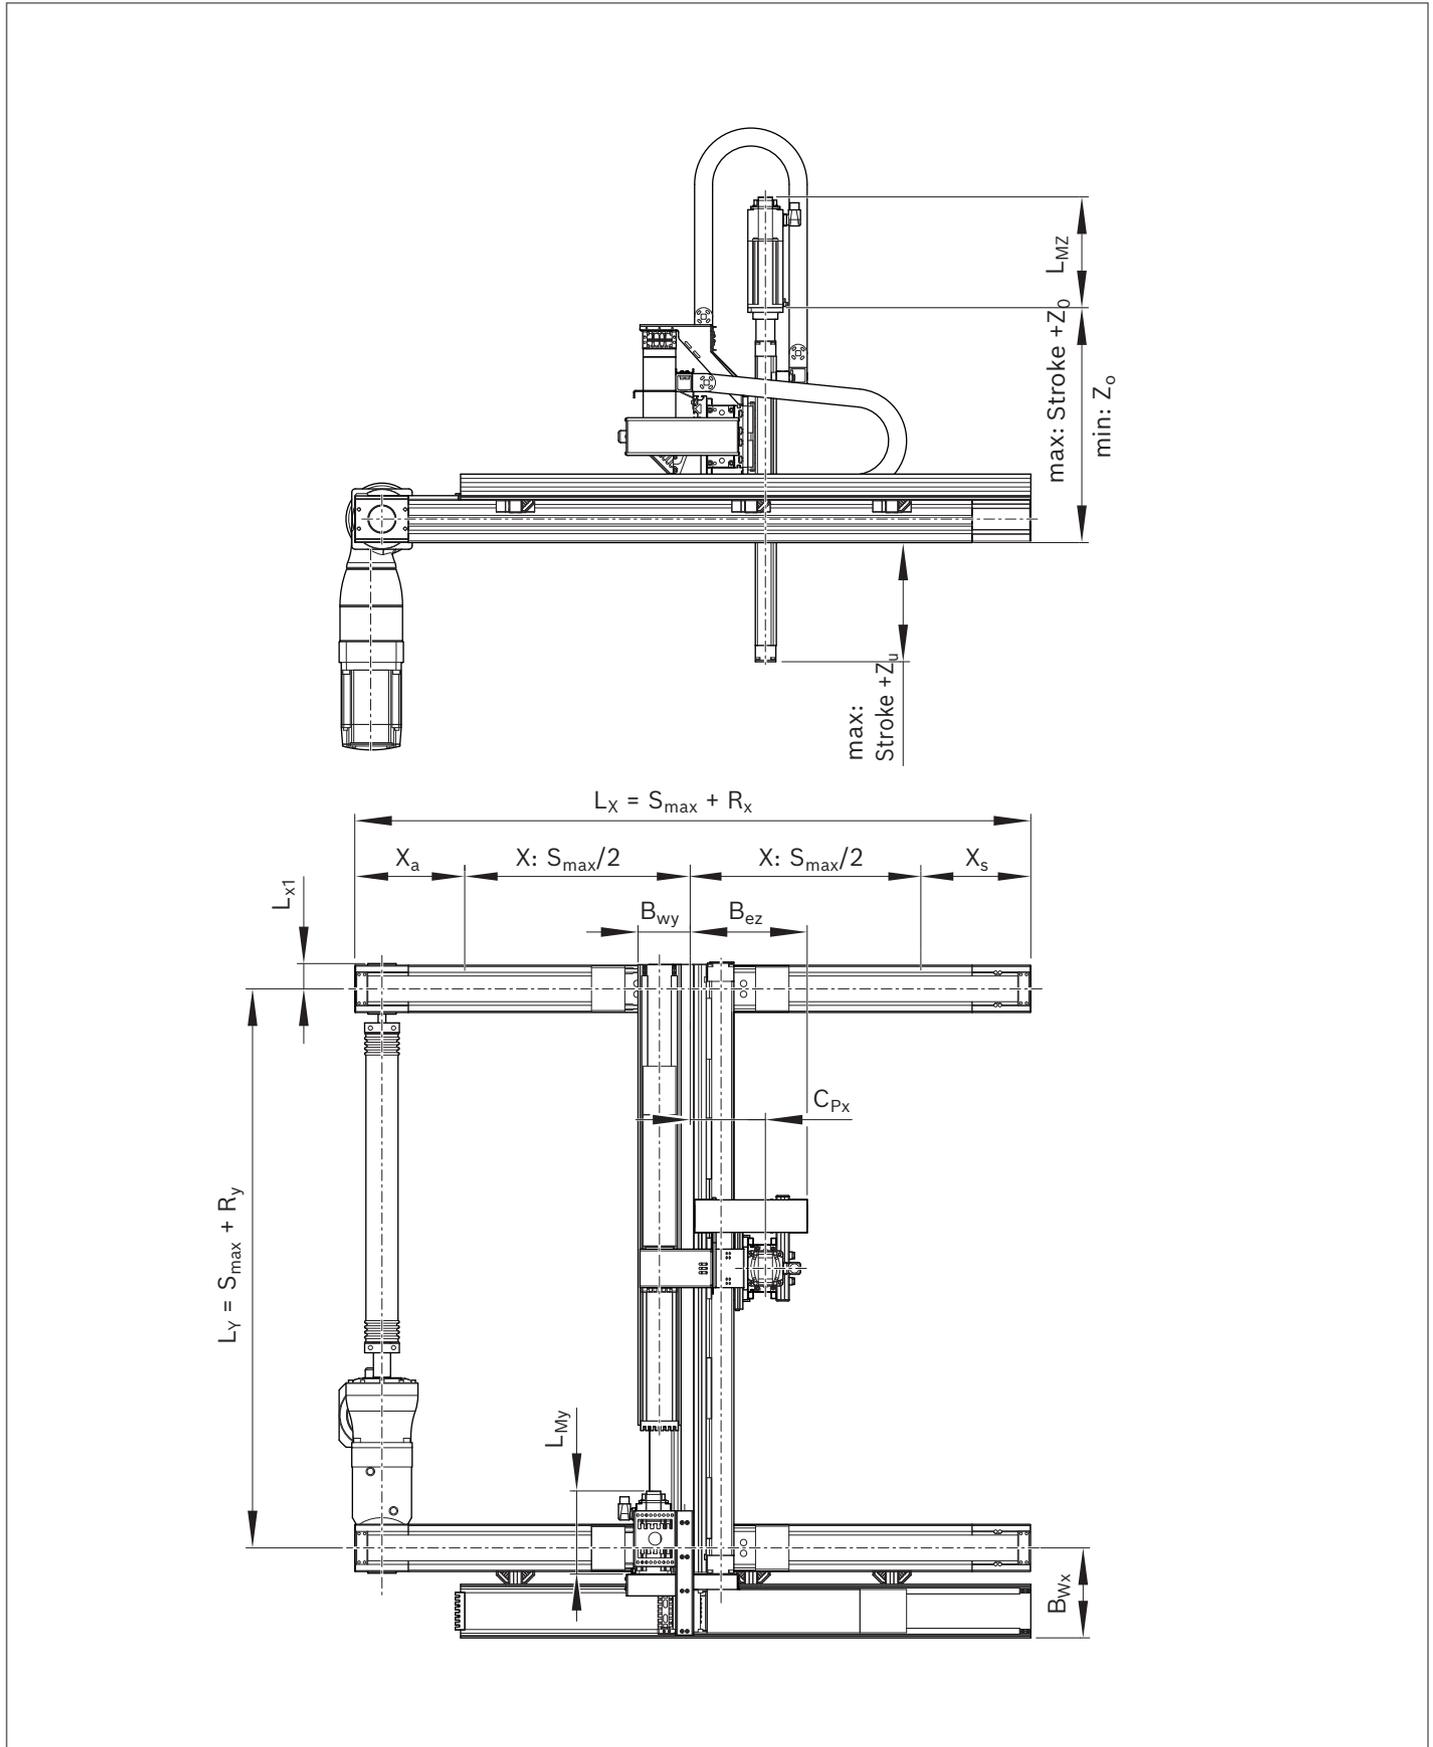

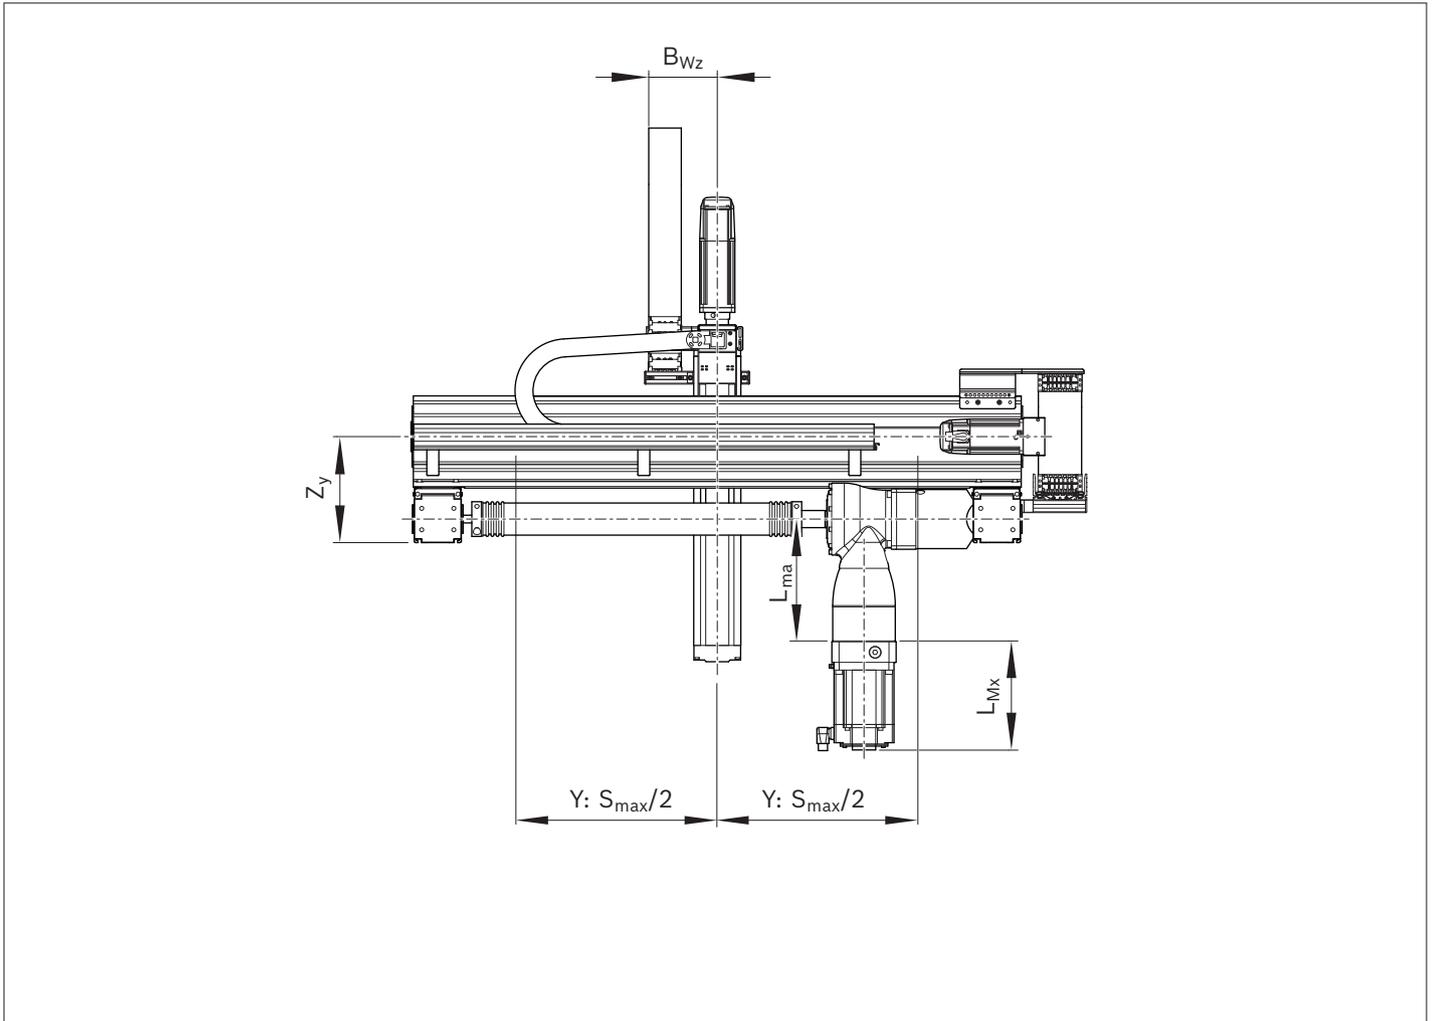

- ▶ 3D gantries are flexible and performance-optimized units for positioning in the three-dimensional working range. They comprise mechanically coupled linear modules with toothed belt drive in the x-direction, compact modules with ball screw assembly or toothed belt drive in the y-direction and a compact module axis with ball screw assembly in the z-direction.
- ▶ By arranging the motor of the X-axis via a T-gear between the linear axes, higher drive torques can be transmitted. A continuous angle in the Y-axis ensures the required rigidity.
- ▶ 6 sizes

Type 2HA

Product description

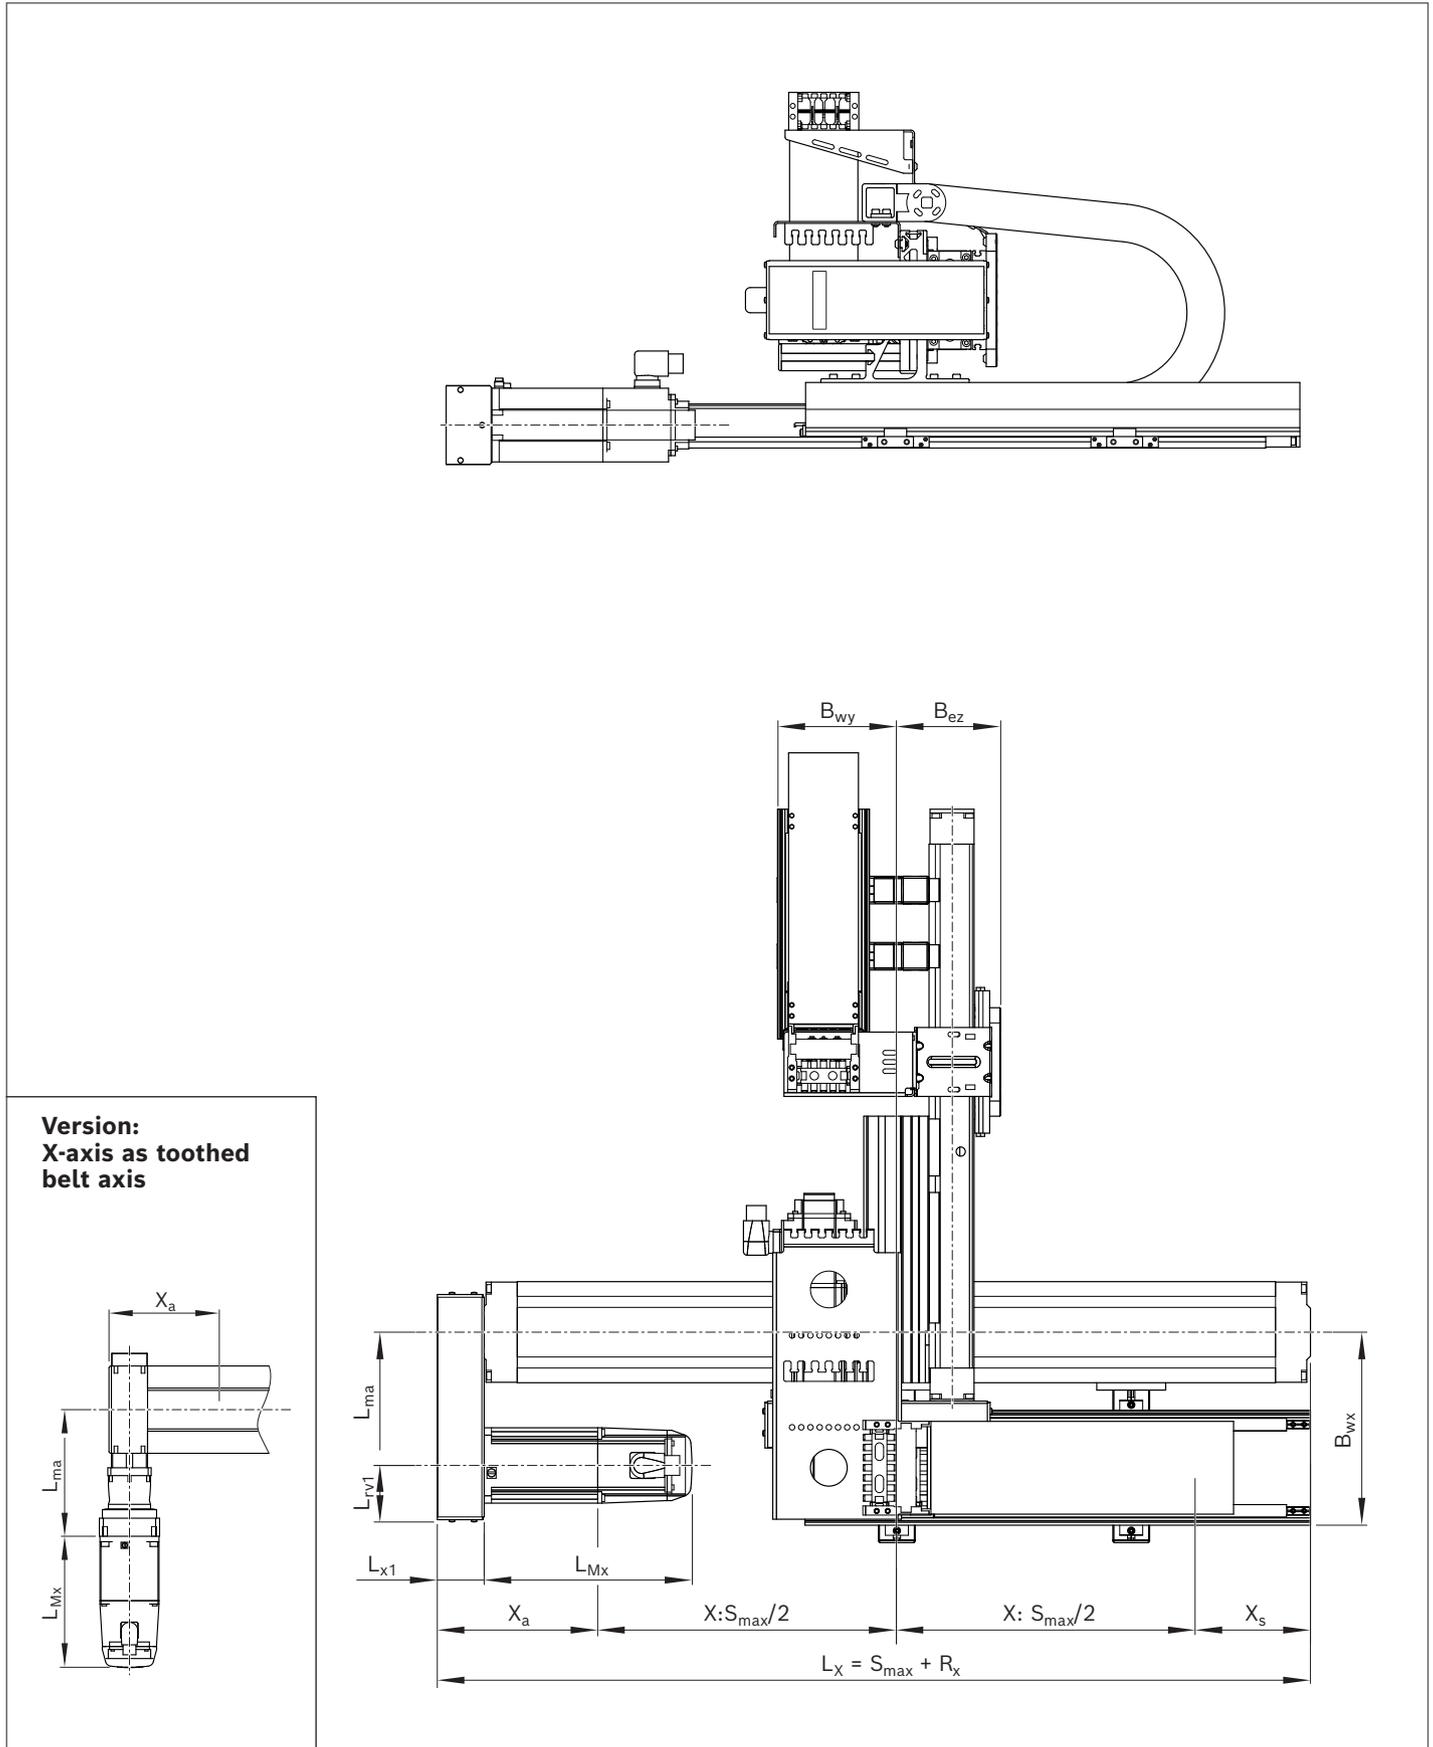

- ▶ The cantilever system 2D cantilever surface is particularly suitable for applications in which the axis system enters the working range from the outside.
- ▶ Compact modules with ball screw assembly or toothed belt drive are available for the X-axis.
- ▶ 12 sizes

Type 2HB

Product description

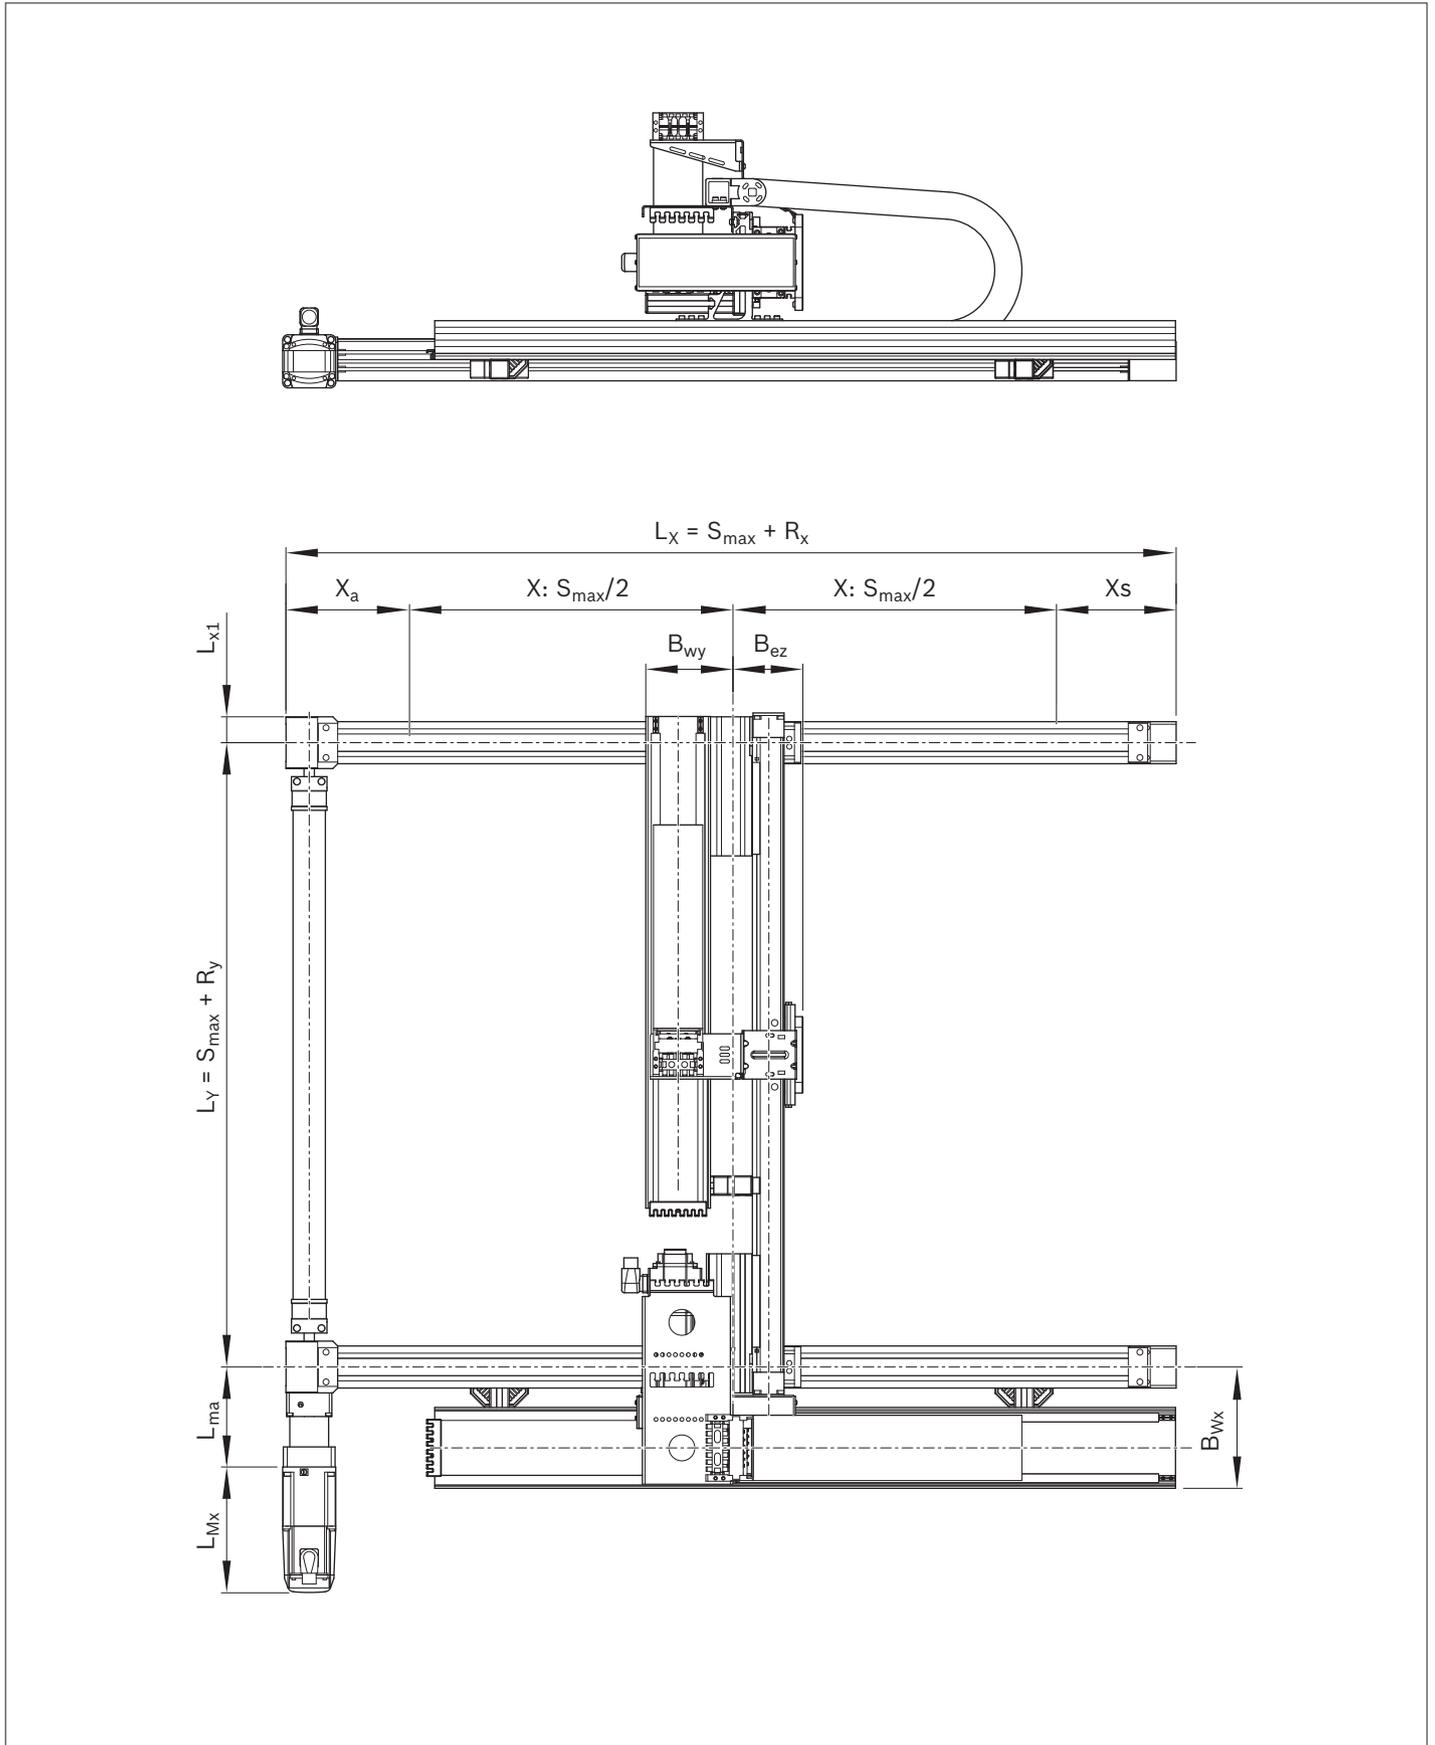

- ▶ The 2D area gantry is dynamically positioned in the x-axis via 2 mechanically coupled linear modules with toothed belt drive.
- ▶ The precise transverse motion in the y-axis is realized by compact modules with ball screw assembly or toothed belt drive.
- ▶ 8 sizes

Type 2VB

Product description

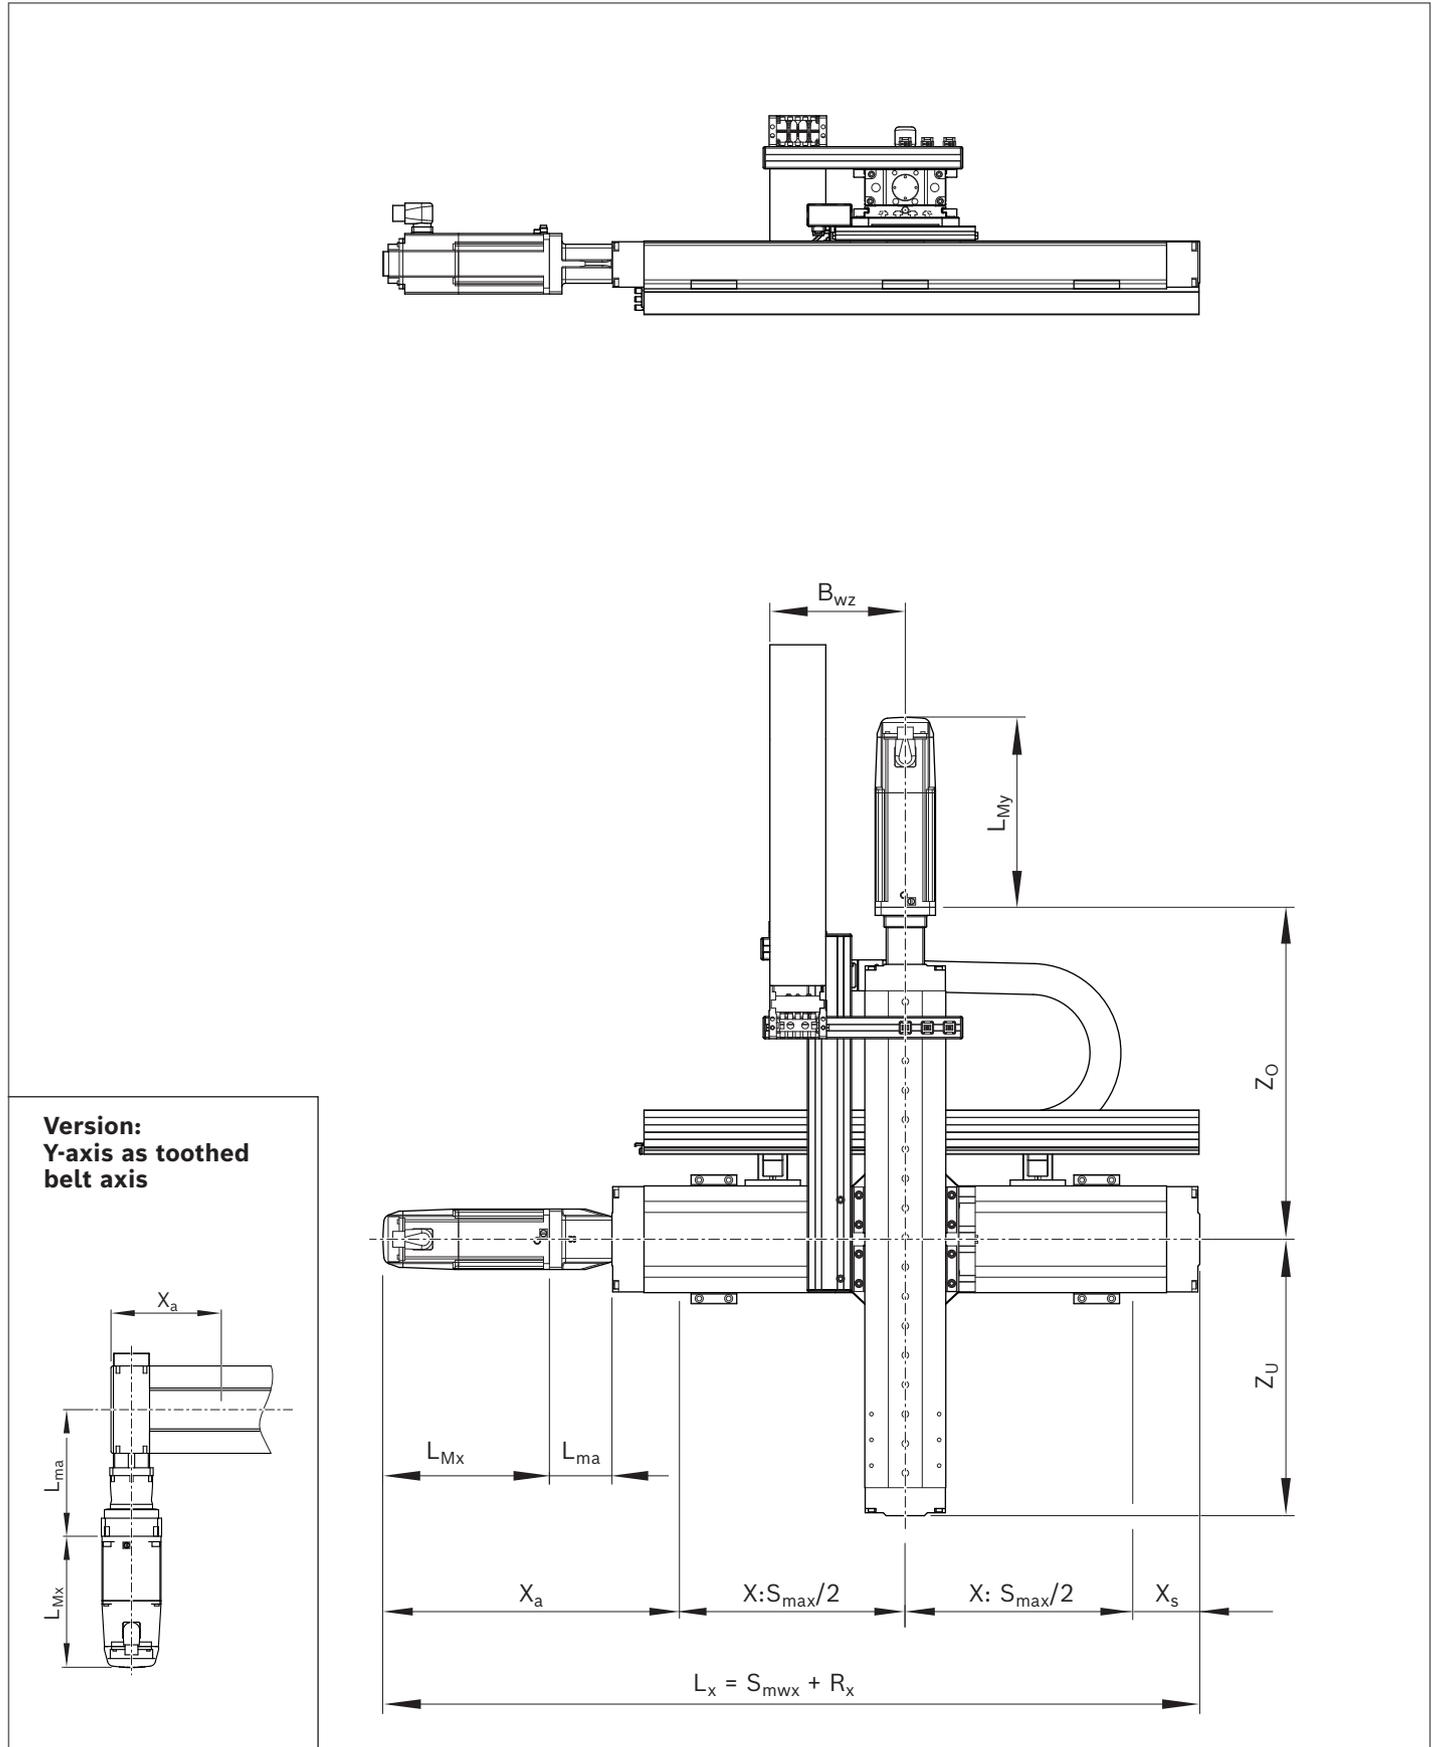

- ▶ 2D linear gantries of type 2VB are units for wall mounting and cover applications with horizontal and vertical movement directions. There are 12 sizes available for these application areas, offering compact modules in the X-axis with ball screw drive (CKK) or toothed belt drive (CKR) types.
- ▶ 12 sizes

Smart Function Kits: System overview

DRIVE AND CONTROL

- ▶ ctrlX DRIVE controller of the latest generation
- ▶ Simple connection to the higher-level control system via Profinet
- ▶ ctrlX CORE control integrated
- ▶ Open interface for i4.0 via OPC-UA
- ▶ Building blocks for connection to higher-level control system
- ▶ ReST programming interface
- ▶ Pre-installed engineering and runtime apps - easily individually extendable
(■ scope of delivery, ■ optional)

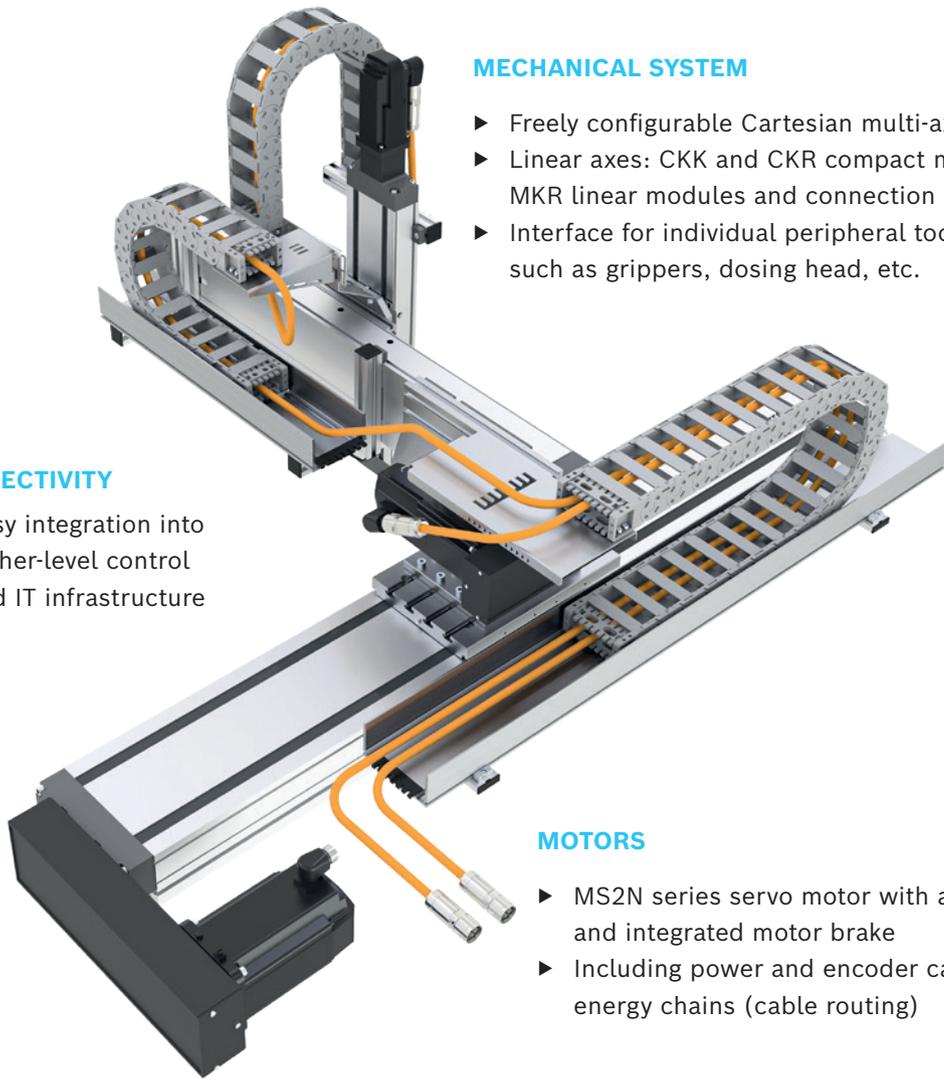

SFK handling	IDE
Automation	PLC
Cartesian motion	VPN
EtherCAT	Firewall
Safety STO	IOT Gateway
OPC-UA	User app
ReST	Node-RED
Python	Remote agent

BROWSER-BASED WEB HMI

- ▶ Pre-installed, intuitive software with application-specific features
- ▶ No programming knowledge required – graphical programming via drag & drop
- ▶ Runs on various end devices starting at 10 inches

MECHANICAL SYSTEM

- ▶ Freely configurable Cartesian multi-axis systems
- ▶ Linear axes: CKK and CKR compact modules, MKR linear modules and connection elements
- ▶ Interface for individual peripheral tools, such as grippers, dosing head, etc.

CONNECTIVITY

- ▶ Easy integration into higher-level control and IT infrastructure

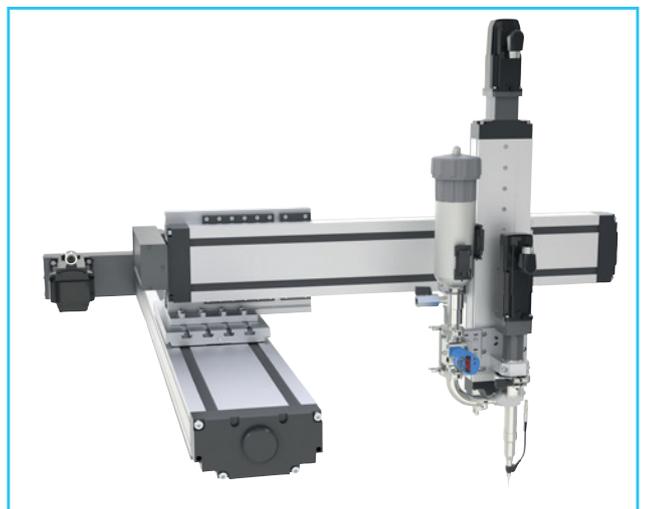

MOTORS

- ▶ MS2N series servo motor with absolute encoder and integrated motor brake
- ▶ Including power and encoder cables as well as energy chains (cable routing)

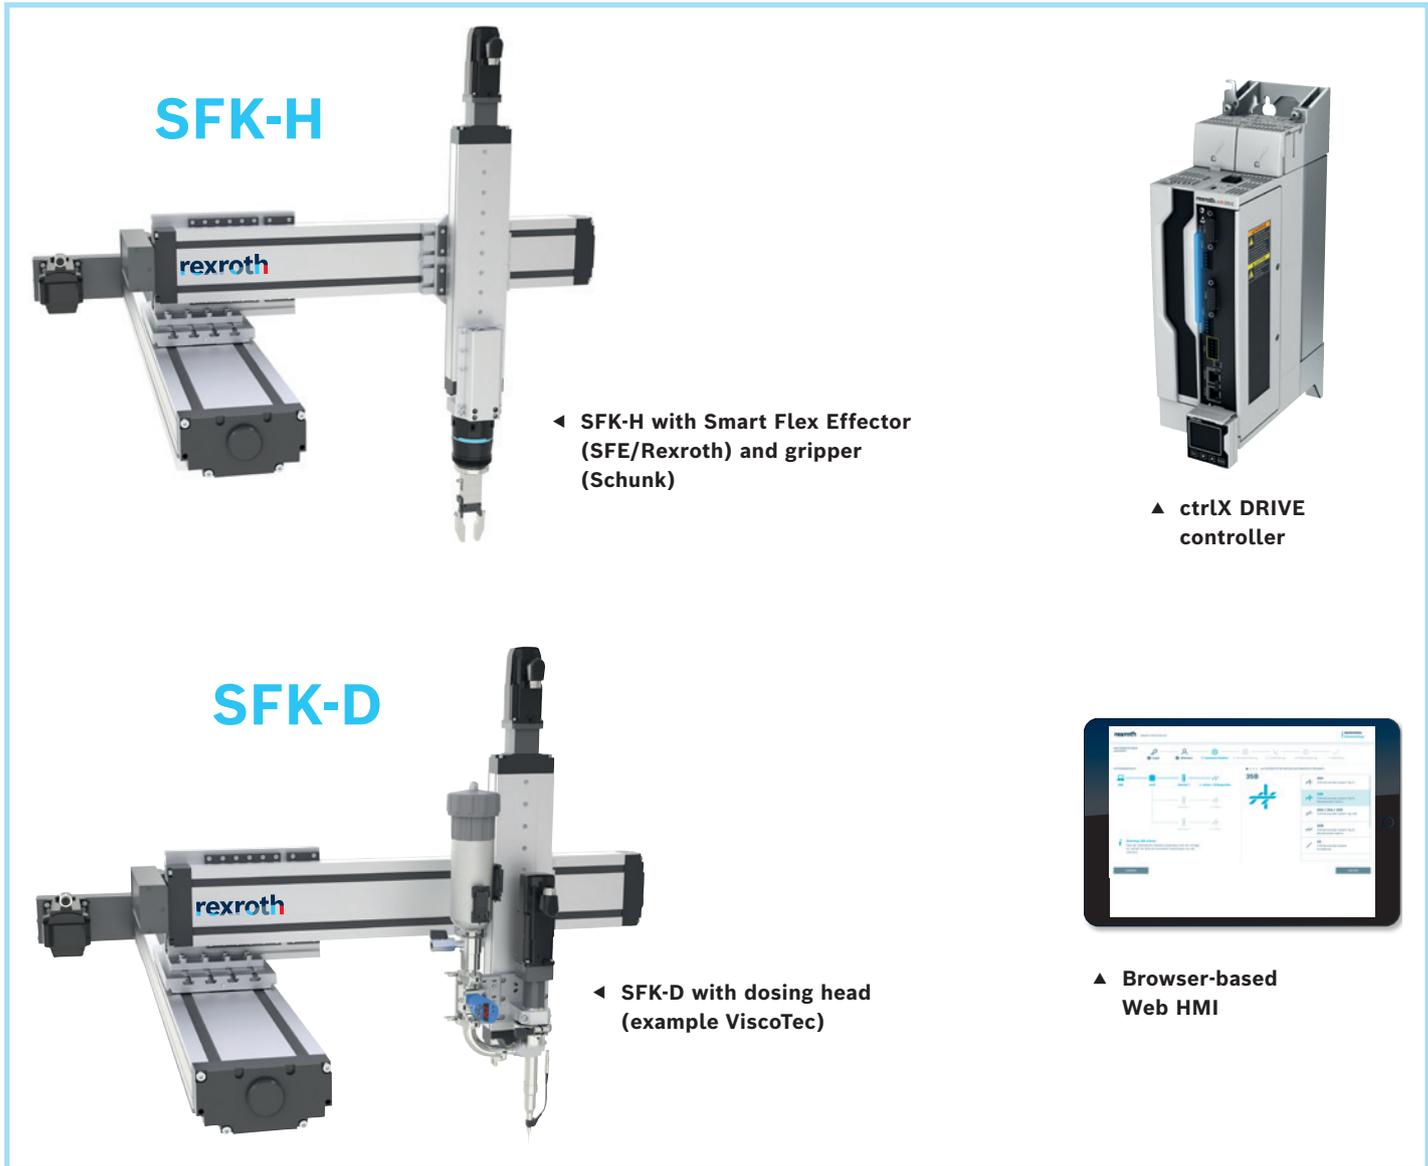

SMART FUNCTION KIT HANDLING (SFK-H)

SMART FUNCTION KIT DISPENSING (SFK-D)

Smart Function Kit Handling (SFK-H) / Dispensing (SFK-D)

THE COMPLETE PACKAGE – INCLUDING SOFTWARE

With the Smart Function Kits for Handling or Dispensing, Bosch Rexroth now offers ready-to-install mechatronic solutions for positioning and handling or dosing. These solutions are simple and intuitive to select, operate and configure and thus save an enormous amount of time in engineering compared to conventional systems. How? Through pre-defined kits that can be designed quickly. In addition, the pre-installed application-specific software enables a Plug & Produce commissioning via wizard and graphical program creation via drag & drop, completely without programming knowledge (zero programming). See for yourself how smart and simple the operation is.

- ▲ Easy integration of process-specific peripherals such as grippers or dosing heads thanks to flexible attachment options. Pre-installed software for fast, intuitive commissioning of the application-specific sub-system.

EASY PRODUCT SELECTION

- ▶ Predefined, coordinated hardware components and software
- ▶ Fast selection and dimensioning with LinSelect
- ▶ All components from a single supplier – with proven Rexroth quality

PLUG & PRODUCE

- ▶ Delivered in a single package, including pre-installed operating software
- ▶ Only a small number of interfaces thanks to an integrated control system
- ▶ Easy wiring thanks to pre-assembled cables
- ▶ Guided commissioning via our wizard (incl. dosing head)¹⁾
- ▶ Auto parameterization of the overall system
- ▶ Referencing the axes

ZERO PROGRAMMING

- ▶ No programming knowledge required
- ▶ Simple and graphical programming of the process
- ▶ Browser-based Web HMI, can be used on various devices
- ▶ Modern and intuitive design
- ▶ Prefabricated dispenser function blocks¹⁾

OPEN INTERFACES

- ▶ Simple connection to higher-level control system
- ▶ Data access via ReST programming interface
- ▶ IoT connection via OPC-UA
- ▶ Open software platform that can be extended via apps
- ▶ Easy connection of application-specific end effectors
- ▶ Compatibility with different dosing heads¹⁾

factory of the future

SMART MECHATRONIX: PLUG & PRODUCE, PERFORM, PROCEED

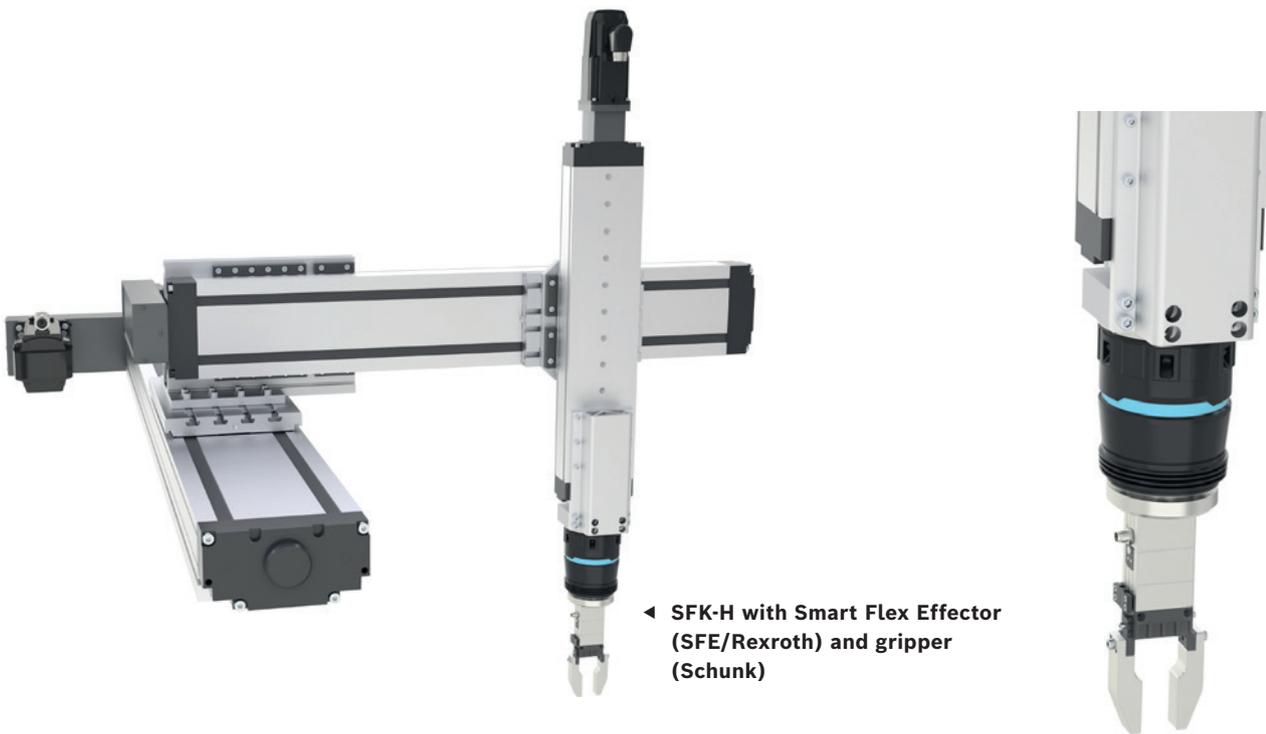

With the new Smart MechatroniX solution platform, which combines best-in-class linear motion technology components with sensors, electronics and software, Bosch Rexroth is responding to market trends in factory automation on the way to the Factory of the Future. The resulting solutions are versatile and open up completely new business models. They allow quick commissioning, offer full process transparency and ensure a short time to market and high productivity.

Product description

Smart Function Kit Handling / Dispensing

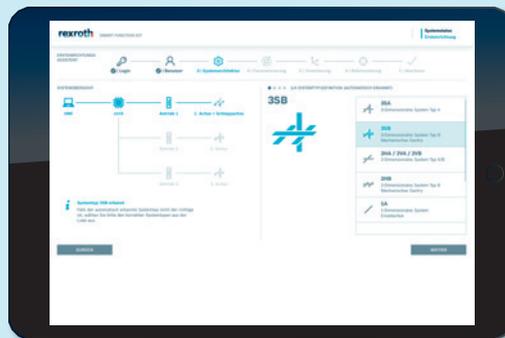

- Based on a Cartesian multi-axis system, various handling and dispensing applications can be realized precisely and reliably in a defined space.
- Proven Rexroth linear axes from the mechatronic building system with currently 36 structural design types available with connection elements and optional cable drag chains and cables are combined with innovative control technology and software to create a perfectly tailored system solution. Everything from a single source.
- Simple connection to the higher-level control system via Profinet
- Simple sizing & product selection via LinSelect and fast online configuration with 3D preview
- Plug & Produce thanks to commissioning wizard and automatic parameterization of dosing heads compatible with multi-axis systems¹⁾
- Graphical process configuration without programming knowledge; incl. prefabricated dispensing functions¹⁾
- The Smart Function Kit can be used as stand-alone solution or incorporated in superior systems via OPC UA.

Smart Function Kit Handling (SFK-H)

The mechatronic building system of the SFK-H is suitable for various positioning and handling tasks.

► Further information from page 68

Smart Function Kit Dispensing (SFK-D)

The Smart Function Kit Dispensing is the right subsystem for a wide range of dosing applications.

Integration of compatible dosing heads

The integration of different compatible dosing heads (e.g. ViscoTec; <https://www.viscotec.de>) makes it possible to offer the perfect dosing solution for your special application. The dosing heads of the RD-EC series from ViscoTec are suitable for a variety of dosing media. For the exact sizing of a suitable dosing head, please contact ViscoTec directly. Compatible dosing heads from ViscoTec: 3RD3 ; 3RD4; 4RD6; 3RD8; 3RD10; 3RD12; Once you decide that you want to use a compatible ViscoTec dosing head, you can select the right accessories.

There are two basic types (**type 1 / type 2**) for the adaptation of dosing heads, each of which is assembled differently and is in each case assigned to a group of structural design types.

► Further information from page 70

¹⁾ For SFK-D

INTUITIVE, EASY-TO-USE SOFTWARE – NO PROGRAMMING KNOWLEDGE REQUIRED

Our specially developed software forms the core element and the basis for realization for handling and dispensing applications. Thanks to the modern, intuitive Web HMI, the software is ready for immediate use, with no previous knowledge required. The commissioning wizard guides you through the setting process step by step, programming is done by drag and drop. These benefits lead to significant time and cost savings.

The image displays two tablets showing the Rexroth Smart Function Kit software. The top tablet shows the 'ERSTEINRICHTUNGS-ASSISTENT' (Commissioning Assistant) interface. It features a progress bar with seven steps: 1. Login, 2. Benutzer (User), 3. Systemarchitektur (System Architecture), 4. Parametrierung (Parameterization), 5. Orientierung (Orientation), 6. Referenzierung (Referencing), and 7. Abschluss (Completion). The current step is '3 | Systemarchitektur'. The main area shows a 'SYSTEMÜBERSICHT' (System Overview) diagram with components: HMI, ctrlX, Antrieb 1 (1. Achse + Schleppachse), Antrieb 2 (2. Achse), and Antrieb 3 (3. Achse). A '3SB' system type is highlighted, with a list of options: 3SA (3-Dimensionales System Typ A), 3SB (3-Dimensionales System Typ B Mechanisches Gantry), 2HA / 2VA / 2VB (2-Dimensionales System Typ A/B), 2HB (2-Dimensionales System Typ B Mechanisches Gantry), and 1A. A message states: 'Systemtyp 3SB erkannt. Falls der automatisch erkannte Systemtyp nicht der richtige ist, wählen Sie bitte den korrekten Systemtypen aus der Liste aus.' (System type 3SB recognized. If the automatically recognized system type is not the correct one, please select the correct system type from the list.) A 'ZURÜCK' (Back) button is at the bottom.

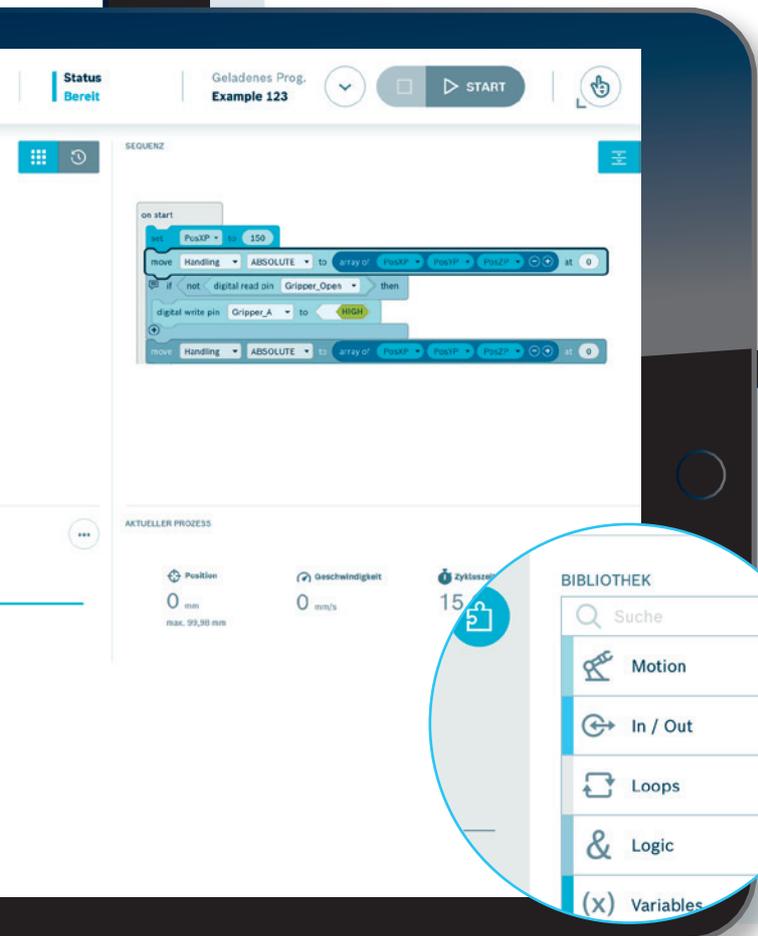

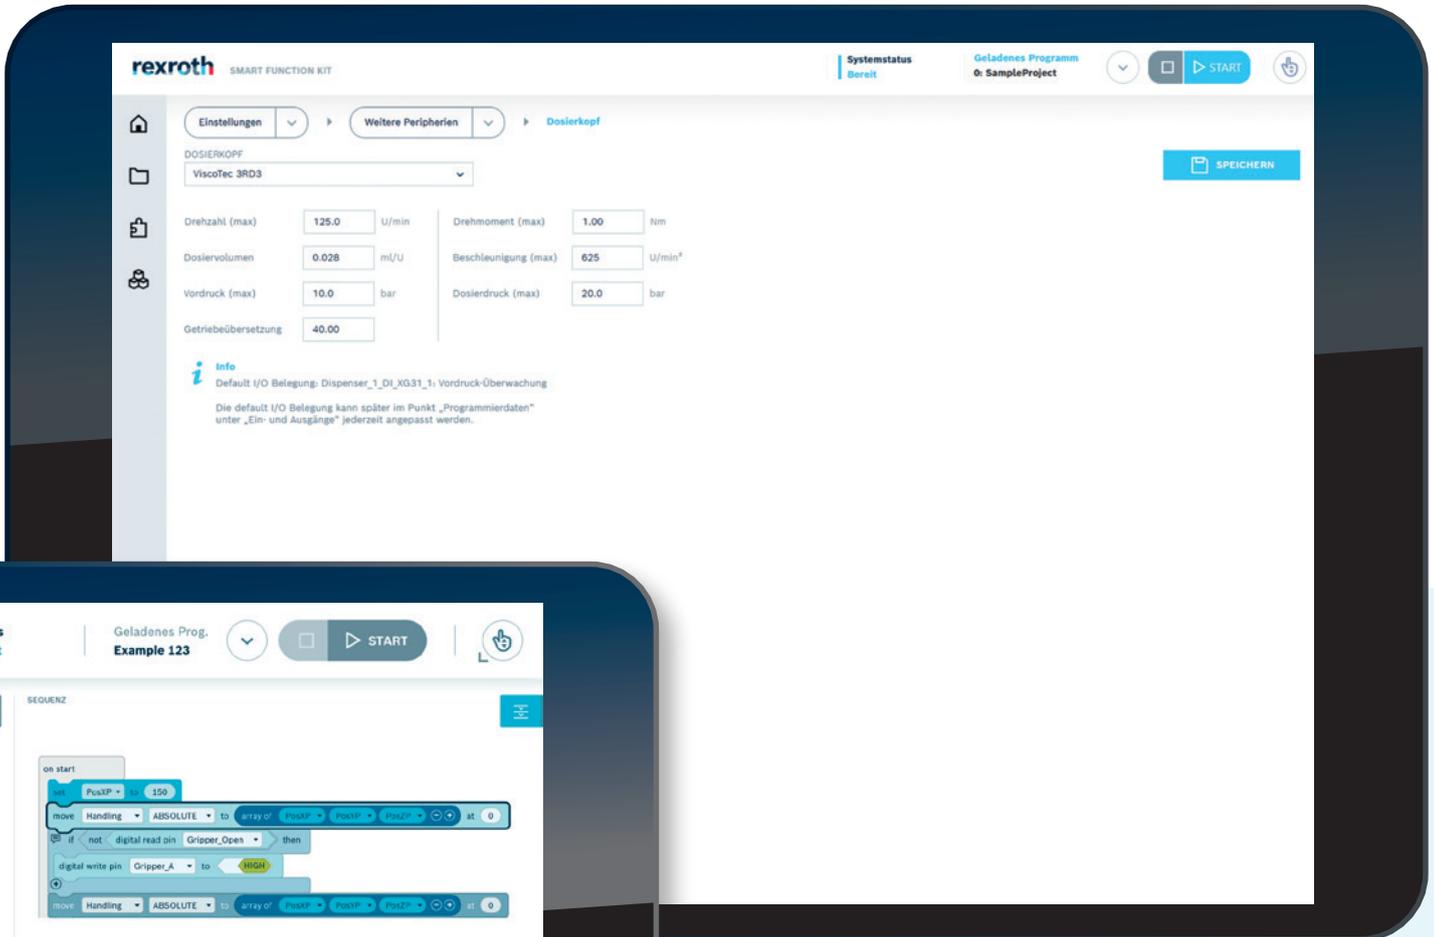

The bottom tablet shows the 'PRODUCTION' monitoring screen. It displays production statistics: 'Gesamt 3 STK' (Total 3 pieces), 'OK 3 STK' (OK 3 pieces), and 'NOK 0 STK' (NOK 0 pieces). A circular gauge shows 'Effizienz 100,00 %' (Efficiency 100.00%). Below this, a 'PRODUKTIONSVERLAUF' (Production Process) section shows '3-Dimensionales System' and '3SB 3-Dimensionales System Typ B Mechanisches Gantry'.

▲ Start with ctrlX:
The pre-installed app (Web HMI) for the Smart Function Kit is fully integrated into the ctrlX application

▲ Commissioning:
The commissioning wizard guides you through the setting process step by step

▶ Auto parameterization:
The system recognizes all axes independently, the drive controllers are parameterized automatically

▶ Referencing:
Intuitive referencing of the axes including visual feedback

▲ **End effector connection:**
 Easy integration and activation of different dosing heads possible

◀ **Process configuration:**
 Intuitive graphical programming - without programming knowledge, with expandable command library and validation of program parameters

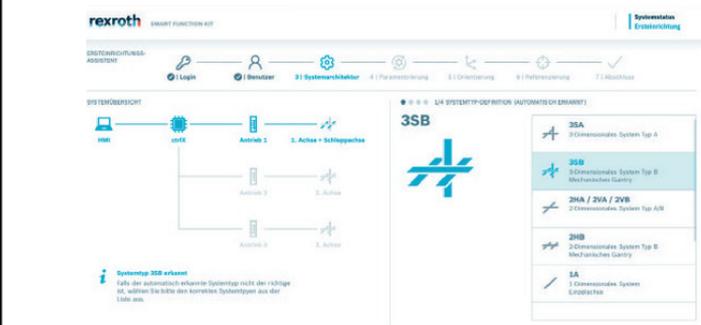

◀ **Web HMI dashboard:**
 Everything at a glance - display of efficiency, program flow, production history and current application-specific process data

Software

**Easy commissioning
(Plug & Produce and fast commissioning)**

- ▶ Pre-installed software
- ▶ The wizard leads you through the commissioning step by step (incl. commissioning of compatible dosing head¹⁾).
- ▶ Automatic loading of the hardware configuration thanks to reading of the motor encoder memories
- ▶ Auto parameterization the drive controllers
- ▶ Guided referencing of the individual axes

Handling

Dispensing

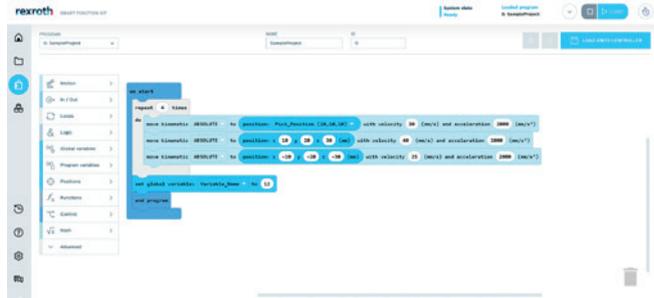

¹⁾ For SFK-D

Simple programming (zero programming)

- ▶ Intuitive graphical programming with drag and drop
- ▶ Expandable library of commands
- ▶ Validation of program parameters
- ▶ Pre-assembled dispense function blocks
- ▶ No programming knowledge required
- ▶ Visualization on the Web HMI

Handling

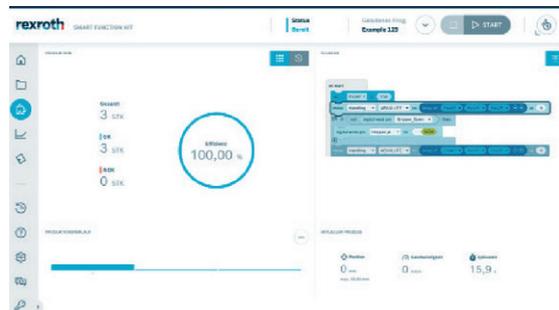

Dispensing

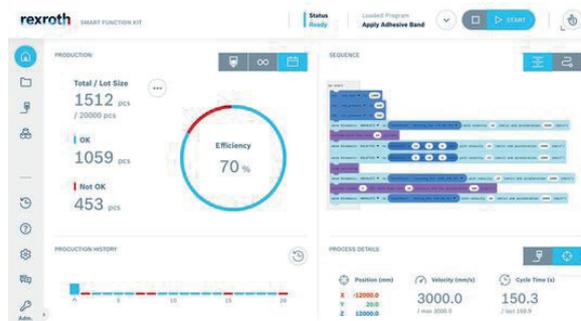

Web HMI dashboard

- ▶ Can be used on various web-enabled terminals from 10-inch display diagonal.
- ▶ Everything in view thanks to a variety of information such as system status and diagnostic messages, program change and jog mode.
- ▶ Program management
- ▶ Current process data such as position, speed, acceleration, etc. are also displayed.

Handling

Dispensing

Drive controller

ctrlX DRIVE controller of the latest generation

- ▶ ctrlX CORE control integrated
- ▶ Simple connection to the higher-level control system via Profinet
- ▶ Open interface for i4.0 via OPC-UA
- ▶ Building blocks for connection to higher-level control system
- ▶ ReST programming interface
- ▶ Pre-installed engineering and runtime apps – easy to extend individually
- ▶ From simple axis with command value specification to the axis-integrated motion system
- ▶ Scalable output of ctrlX DRIVE servo drives from 6 to 375 Apeak and ctrlX DRIVE servo motors from 3.7 to 692 Nmpeak
- ▶ Space-saving design: Suitable for 300 mm control cabinets, 25 mm width per axis, 30% more compact motors
- ▶ Plug & play: ctrlX DRIVE and ctrlX DRIVE servo motors with single-cable technology
- ▶ Optimum adaptation to the machine requirements through a broad motor portfolio: rotary, linear, kit or housed

- 1) Scope of delivery
2) Optional

- 1)
2)

APP overview see page 75

Please note that the choice of controllers depends on the selected axis system. ctrlX I/O modules

Field bus coupler S20-EC-BK

- ▶ EtherCAT bus coupler
- Serial interface S20-RS-UNI:**
- ▶ 1 serial input and output channel
- 2x digital input and output module S20-DIDO-8/1:**
- ▶ 8 digital inputs and outputs; 24 V DC; 2.4 mA input current; 0.5 A output current
- Interfaces**
- OPC-UA interface**
- ▶ OPC-UA = Open Platform Communications – Unified Architecture
- ▶ Open communication standard for data exchange and networking of plants and subsystems with each other and with higher-level IT systems (horizontal and vertical networking).
- ▶ Smart Function Kit for Handling with integrated OPC-UA server
- ▶ Faster integration of the Smart Function Kit for Handling into the plant and IT architecture
- ▶ Access to data and functions of the Smart Function Kit for Handling, independent of the platform or language
- HTTP Rest API interface**
- ▶ REST= REpresentational State Transfer Architecture (= Stateless, resource-based)
- ▶ Easy communication with the Smart Function Kit for Handling from an IT system (e.g. web interface, high-level language program, server)
- ▶ Getting and posting messages for HTTP communication with the Smart Function Kit for Handling (data exchange in JSON format)
- ▶ Request and creation of programs
- ▶ Remote access to system settings of the Smart Press Kit (e.g. I/O assignment, IP address)
- ▶ Suitable for all data that is to be read or written once (= "non-live" data)

Safety

Scope of delivery by Bosch Rexroth:
 Incomplete machinery without CE mark according to MRL optional multi-encoder interface for resolver, A duty of the customer (as machine manufacturer):
 Compliance with the requirements according to MRL (e.g. risk assessment, safety concept, protective safeguards, CE approval)
 Possible safety concept:

- Protective enclosure of the hazardous area
- Use of safe door switches (possibly with guard locking) with relay e.g.: PILZ safety relay 750105 + PILZ safety switch 504220
- Wiring the relay to HCS01 STO inputs

Safety category 4 with performance level (PL) achievable.

**STO not usable via ProfiSAFE etc.
 Connection only via hardware circuitry**

I/O modules

You have the option to select an I/O expansion module which is composed of the following single parts to form an assembly:

When using Ethercat, follow the order (as per Ethercat.xml).

1x S20-EC-BK

- ▶ Up to 63 additional S20 participants can be connected
- ▶ 2 RJ45 connectors
- ▶ Rotary coding switch
- ▶ Automatic addressing
- ▶ Illustration of the station as a modular EtherCAT device using a modular device profile (MDP)

1 serial input and output channel in RS232 or RS485/422 version S20-RS-UNI

- ▶ 1 serial input and output channel in RS232 or RS485/422 version
- ▶ Multiple protocol support
- ▶ Transmission rate adjustable up to 250,000 baud
- ▶ Parameterization via the PDI channel
- ▶ Electronic device name plate

8 inputs/outputs, 1-wire technology S20-DIDO-8/1

- ▶ 8 digital inputs and outputs
- ▶ 24 V DC, 2.4 mA input current, 0.5 A output current
- ▶ Connection of sensors and actuators in 1-wire technology
- ▶ Filter times can be adjusted in three stages: < 100 μ s, 1000 μ s, or 3000 μ s
- ▶ Maximum input frequency: 5 kHz

APP overview

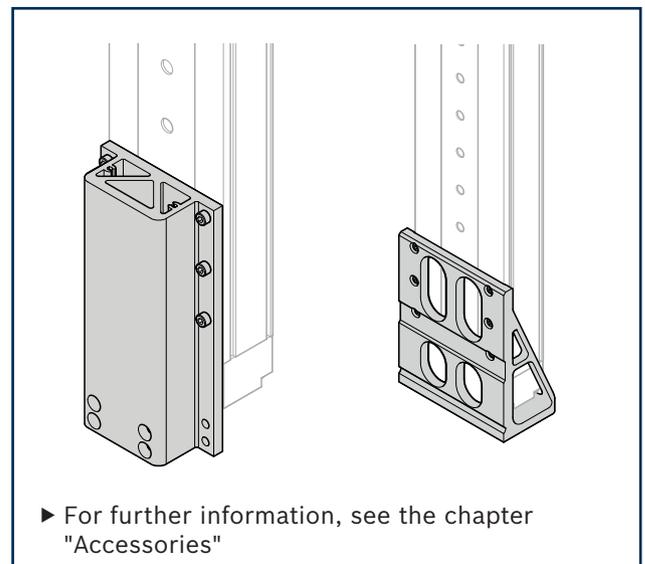

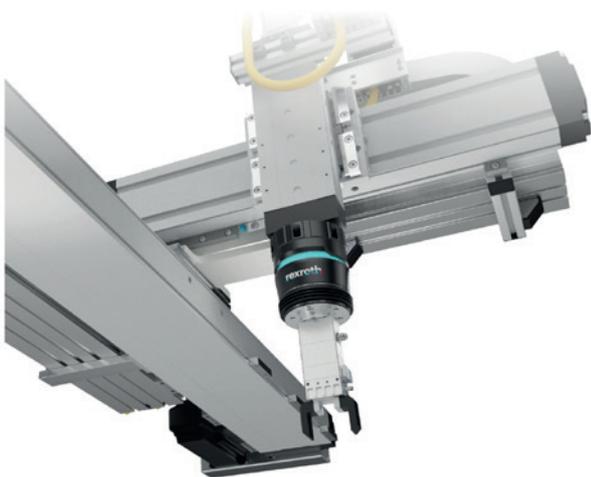

<p>Smart Function Kit Handling app</p>		<p>The pre-installed Smart Function Kit app features a modern, intuitive dashboard.</p> <p>Fast commissioning & Plug & Produce</p> <ul style="list-style-type: none"> - The commissioning wizard guides through the commissioning process step by step - Automatic readout of motor encoder memory data - Automatic parameterization of all individual axes - Guided referencing <p>Zero programming</p> <ul style="list-style-type: none"> - Intuitive graphical programming – without programming knowledge - Logical arrangement of the program modules with drag and drop - Comprehensive building block library
<p>ctrlX CORE - Motion app</p>		<p>The ctrlX MOTION app provides the basic motion functions for single axis positioning.</p>
<p>EtherCAT app</p>		<p>The EtherCAT app offers a field bus communication protocol for the highest demands in terms of performance and openness with the fastest growing ecosystem. It offers IT-based communication standards for most simple IoT integration.</p>
<p>ctrlX CORE - OPC UA Server app</p>		<p>The OPC UA Server app provides standardized and safe communication according to the OPC Unified Architecture (OPC UA) standard. As an OPC UA server, ctrlX CORE makes all device data available to all connected OPC UA clients. Typical clients are HMI, Manufacturing Execution (MES) or data recording systems.</p>
<p>ctrlX CORE - Python Runtime app</p>		<p>ctrlX CORE - Python Runtime app The Python Runtime app provides the runtime environment for executing Python code on the ctrlX CORE.</p>
<p>IDE APP</p>		<p>The IDE app offers various development environments (code editor, console, debugging, etc.) by means of which program sequences for ctrlX CORE can be created.</p>
<p>ctrlX CORE - PLC app</p>		<p>The PLC app builds on the powerful PLC runtime system of CoDeSys V3 and supplements it with extensive technology libraries from Rexroth. The tool ctrlX PLC Engineering is part of the comprehensive engineering kit ctrlX WORKS, which is provided free of charge. There you have the frame application and the possibility to use the functions provided with the runtime and additional libraries. The PLC app contains the runtime for the realization of your IEC61131 PLC program.</p>
<p>ctrlX CORE - VPN Client app</p>		<p>The VPN Client app enables secure, encrypted communication with one or more endpoints for remote maintenance or streaming of sensitive data. Depending on the existing IT infrastructure, the VPN app offers users a simple way to configure secure remote access to the entire production line or just individual machines. The app supports creation and configuration of IPSec and OpenVPN connections. In the basic scope, the synchronous setup of up to two VPN connections is possible.</p>
<p>ctrlX CORE - Firewall app</p>		<p>The firewall app can be used to individually restrict communication between controller (device) and network(s). Thus, the machine is protected from unauthorized third-party access by viruses and Trojan horses. The Firewall app uses the Nftables firewall technology.</p>
<p>Node RED (optional) ctrlX CORE - Node-RED app</p>		<p>The Node-RED app is the Node-RED framework adapted for ctrlX AUTOMATION from Bosch Rexroth. The open source tool Node-RED is licensed under the 2.0 license and is a graphical development tool developed by IBM. On the server side, the framework is based on Node.js, while operation is performed via a graphical user interface in the browser. With Node-RED, different nodes for input, output and processing can be connected in a so-called flow. This allows data to be processed and various processes or devices to be monitored and controlled.</p>

Smart Function Kit Handling (SFK-H)

Smart Function Kit Handling (SFK-H)

The mechatronic building system of the Smart Function Kit Handling is suitable for a wide range of positioning and handling tasks.

Example: SFK-H with Smart Flex Effector (SFE)
by Rexroth and gripper (Schunk)

Smart Function Kit Dispensing (SFK-D)

Example adaptation of the RD-EC series from ViscoTec to the SFK-D

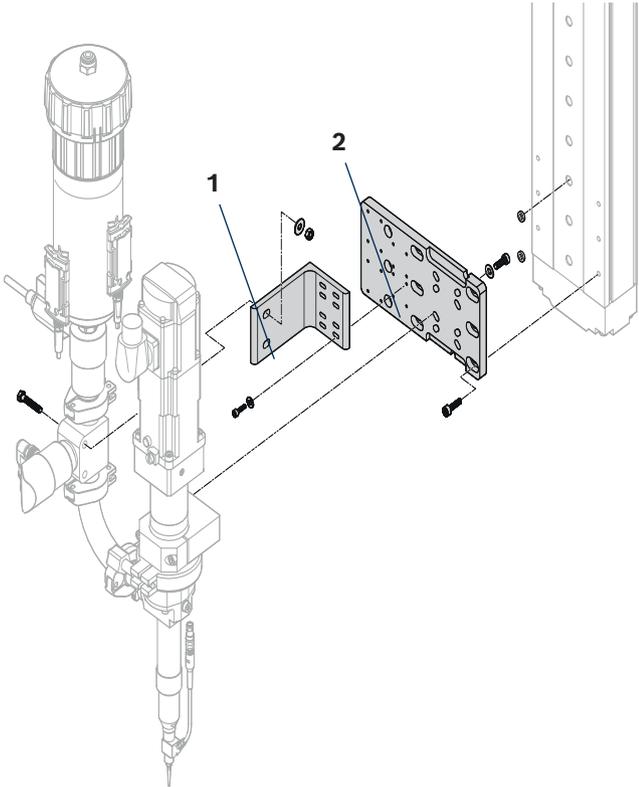

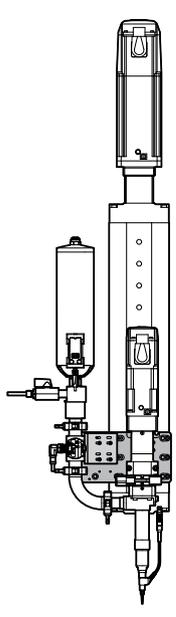

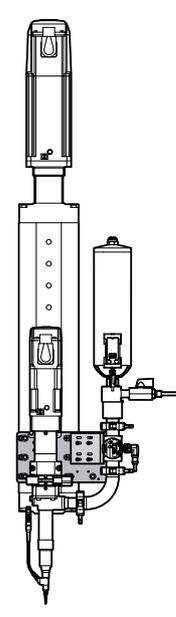

Smart Function Kit Dispensing (SFK-D)

Scope of delivery: SFK-D; additional drive (single-axis inverter XMS); angle (1), plate (2) and plate (3) (only for type 2) and assembly material.

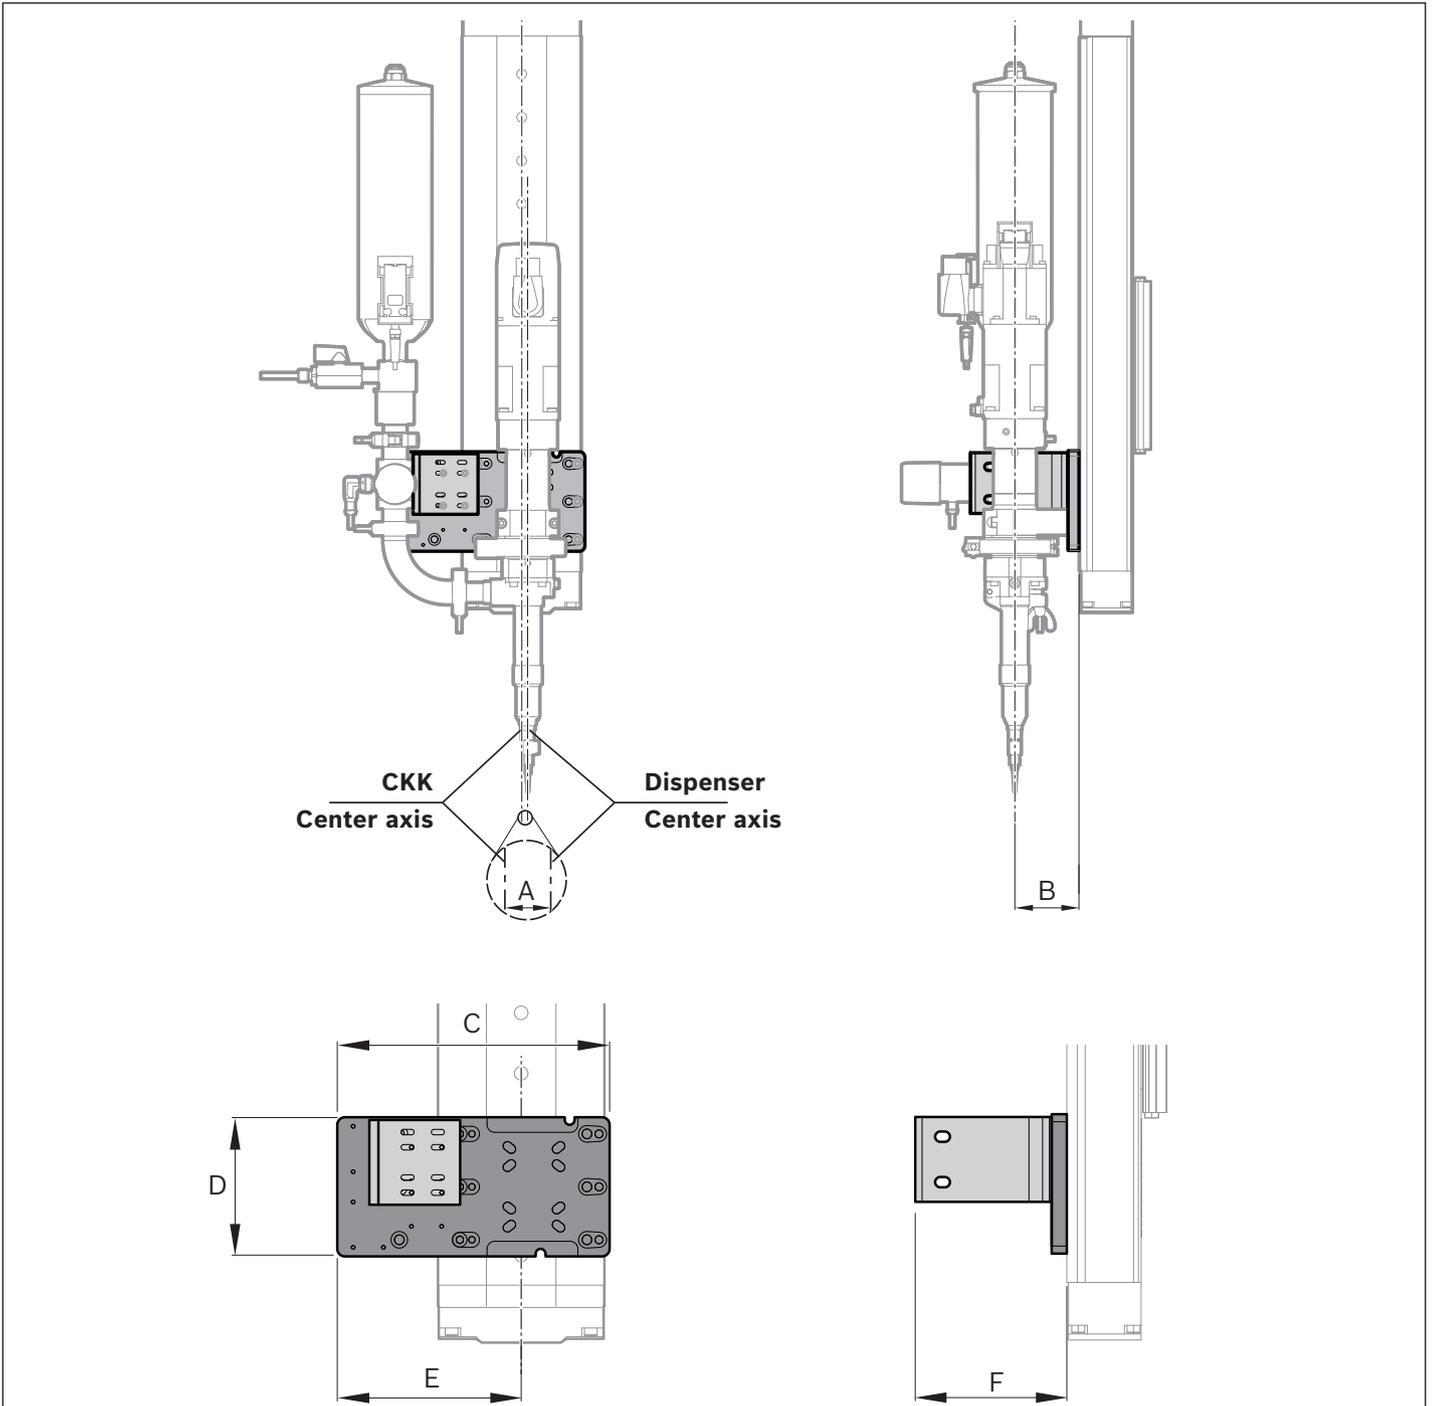

The exact assembly and arrangement of the single parts depends on the configuration of the axis system.
For details, please refer to the hardware instructions R320103224.

Type 1, valid for axis combination:

3SA-20, 3SA-21, 3SA-22, 3SA-23, 3SA-30, 3SA-31, 3SB-20, 3SB-21, 3SB-22, 3SB-23, 3SB-30, 3SB-31, 3SB-40, 3SB-41, 3SC-22, 3SC-23, 3SC-30, 3SC-31, 3SC-40, 3SC-41, 2VA-20, 2VA-21, 2VA-22, 2VA-23, 2VA-30, 2VA-31, 2VA-32, 2VA-33, 2VB-20, 2VB-21, 2VB-22, 2VB-23, 2VB-30, 2VB-31, 2VB-32, 2VB-33, 2VB-40, 2VB-41

Angle (1), plate (2) allow a quick mounting of the dosing head	Installation situation

Drive (another drive controller for ViscoTec dosing head is supplied)
Single axis inverter XMS / XMS2-W0016ANN-01AETT0NNNN-S03RSN2NNNN0NN

- ▶ From simple axis with command value specification to the axis-integrated motion system
- ▶ Scalable power. Inverters from 6 to 375 A_{peak}
- ▶ Less cabling thanks to single-cable technology with MS2N synchronous servo motors and up to 75 m cable length without add-on components
- ▶ Free choice of the motor encoder or, for example, of a second encoder.
Optional multi-encoder interface for resolver, AcuroLink, Hiperface, EnDat 2.2, SSI
- ▶ Integrated safety technology up to SIL3

Motor cable (another motor cable is laid in the cable track chain)

▶ For further information, see the chapter "Accessories"

Overview

Fastening options on the relevant axes depend on the type and size of the multi-axis system.

Example: 2D area gantry, type 2HB, size 30

According to the table, information on mounting the x-axis (basic axis) can be found in section "Fig. B2" for the required size MKR-080.

Cable drag chains

Features

- ▶ ESD-capable
- ▶ Smooth running
- ▶ High stability
- ▶ Flexible interior layout
- ▶ Chain connector with integrated strain relief

Bending radius

- ▶ Minimum bending radius 100 mm
- ▶ Customer cables or hoses: Observe the manufacturer's specifications

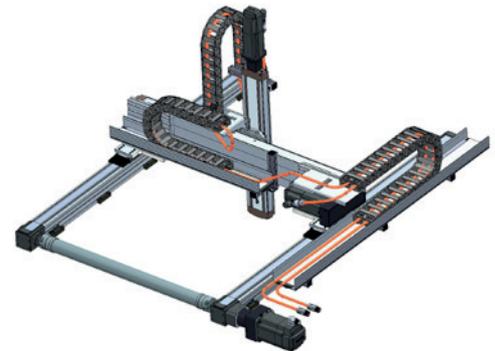

Cable drag chains can be selected as an option

Cable drag chains with cable (for single-cable connection)

The scope of delivery includes cable drag chains, storage trays as well as all fastening material and is completely mounted on the multi-axis system.

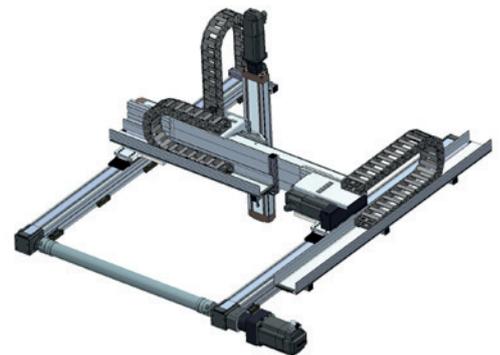

With cables connected (plug connection), which are routed in the cable drag chains to the output of the storage tray of the basic axis. The cable ends and the motor of the basic axis are designed with a plug connection thus offering the option of connecting cables to the controller.

Cable drag chain without cable:

The scope of delivery includes cable drag chains, storage trays as well as all fastening material and is completely mounted on the multi-axis system.

All motors without motor cable.

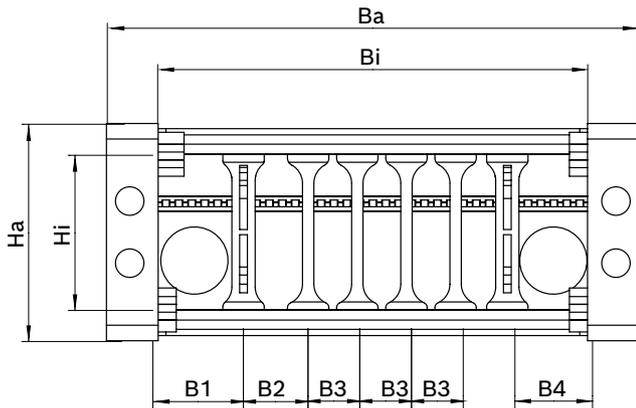

Without cable drag chain, without cable:

The multi-axis system does not have cable drag chain and cable

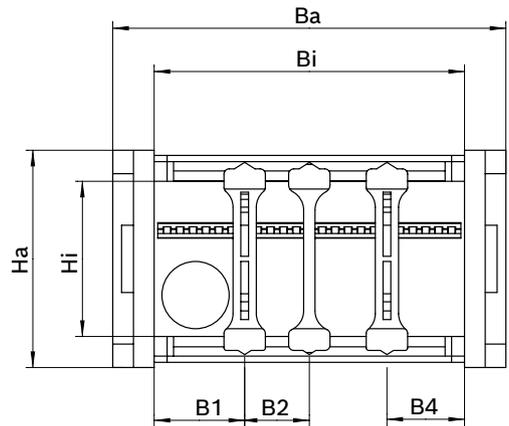

Illustrations are exemplary

Perfect fit: Choose the best way to your product

ONLINE

All product selection guides are immediately available via the Bosch Rexroth website

With Bosch Rexroth, you can find the right product for you quickly and – both online and offline. With comprehensive information, consistent eTools for the simplest selection and configuration without engineering effort, simple ordering and personal support at any time. The perfect basis for building best-in-class multi-axis systems. Fast and economical.

SIMPLY SELECT, CONFIGURE, ORDER

We want you to reach your goal as easily and quickly as possible, depending on the level of information and requirements. That is our claim. With the latest generation of the central selection tool LinSelect, you can find the right product selection with just a few parameters, transfer it to the configurator, generate 3D models if required and order conveniently. You can also use the direct contact at any time!

Operating conditions

Normal operating conditions

Ambient temperature with Bosch Rexroth servo motor	0 °C ... 40 °C, loss of performance above 40 °C
Ambient temperature for mechanical system (no dropping below dew point)	-10 °C ... 50 °C
Soiling	Not permissible

Required and supplementary documentation

For further instructions and information, please refer to the documentation for this product.

You can find PDF files of these documents on the Internet at www.boschrexroth.com/mediadirectory.

We would also be happy to send you the documents that you want.

If you are unsure about using this product, please contact Bosch Rexroth.

Service

Linear motion technology servicing: Maximum machine availability and productivity

Rexroth servicing for linear motion technology means partnership over the entire life cycle of your systems. We are there to help you in 80 countries around the world. From emergency repairs to field service, with original spare parts, modernization and predictive maintenance services. And beyond that with an extensive training portfolio. Working together, we increase your productivity and ensure maximum availability.

REPAIR

- ▶ Analysis
- ▶ Expert overhauls
- ▶ Cost control

SPARE PARTS

- ▶ Inexpensive
- ▶ Time-saving
- ▶ Spare parts from the original manufacturer
- ▶ Low storage costs

FIELD SERVICE

- ▶ Repairs on location
- ▶ Reduced downtimes
- ▶ Customer-specific service packages

TRAINING

- ▶ Professional assembly
- ▶ Replacing wear parts
- ▶ Damage analysis
- ▶ Rexroth Academy
- ▶ How-to videos

Success story

WE MOVE. YOU WIN.
SUCCESS STORY

If a standardized multi-axis system cannot optimally meet your requirements, Bosch Rexroth will tailor an individual solution for you. Here's an example:

Electrochemical machining with ready-to-install six-axis handling system

Compact, robust and highly precise

THE CHALLENGE

Today's machines for electrochemical machining (ECM) should have short cycle times and work with micrometer precision even over long travel distances. At the same time, use in corrosive salt spray places huge demands on the material. With the help of Rexroth components, the medium-sized EMAG Group developed a new modular and economical machine concept for use in such environments. It should be particularly compact and cover all process steps – from pre-cleaning and electrochemical machining to post-cleaning and testing.

THE REXROTH SOLUTION

The modular, corrosion-resistant six-axis multi-axis system with an integrated high-precision IMS-I measuring system includes a complete sensor system and evaluation electronics in the runner blocks. The fully pre-assembled system is based on adapted standard modules from Rexroth's linear motion technology toolbox. The positive-locking connection technology allows quick final assembly with no need for time-consuming adjustment. An automated central lubrication system guarantees minimum maintenance and maximum service life.

THE COMPONENTS

Two three-axis systems

THE RESULT

"Rexroth achieved our goals as regards compactness, costs and flexibility."

Alexander Noller,
EMAG
